### Understanding the Jefferson County E9-1-1 Addressing System

**Within the County:**

- Structures are typically addressed at intersection of driveway and road (access point for emergency services)

- A structure’s address is based on the distance from the start of the road divided by 5.28 (this allows for 1000 addresses per mile)

  **Sample Addresses:**

<table>
<thead>
<tr>
<th>Address #</th>
<th>Distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>18</td>
<td>100 ft</td>
</tr>
<tr>
<td>100</td>
<td>528 ft (1/10 mile)</td>
</tr>
<tr>
<td>1000</td>
<td>5280 ft (1 mile)</td>
</tr>
<tr>
<td>7500</td>
<td>39600 ft (7.5 miles)</td>
</tr>
</tbody>
</table>

- Addresses run South to North or West to East

- Dead-end streets and Cul-de-sacs are addressed from the start of the road regardless of direction

- Odd numbers are on the left, Even numbers are on the right

**Within the City:**

- May follow 5.28 standard OR city-block style addressing

- City-block style addressing progresses outward from the center of town

---

**Disclaimer:**

Please keep in mind that these addressing rules are like any other set of rules. Though few in number, there are always exceptions.

---
