

Sam Michaels Playground Bid-

Questions and Responses-July 14, 2023

1. The playground is in a wooded area, and the park drawing indicator shows part of that area may include trees that could obstruct with the playground layout. The 50'x80' available area is larger than needed for the budget and specs, but it also looks like part of the site is clear for the equipment. Can you verify that no trees will be required to be removed for the new equipment? **There is a large clear area, free of trees that used to be a volleyball court, we can also extend the play area out further from the trees as needed. Trees should not have to be removed.**
2. Would you please confirm the firm placing the bid must also be a licensed WV Contractor? **The installer/contractor must be licensed in WV.**
3. Do you have a basis of design vendor with illustrative drawings? We do not have any illustrative drawings. **Pics of current playgrounds in our park system can be found at www.jcprc.org/**
4. Is the current playground equipment and slide there staying? **Yes; the dome, slide, swings, and spring riders that are near the projected new playground will remain.**
5. What is the height of the slide that will be remaining? **About 12 ft.**
6. Would we have to surface and border around the slide if it remains? **No**
