 - Boring Locations & Contaminants Concentration Map
 - Soil Sampling Data log – 8/9/2010
- Appendix 1. List of “hits” by Boring
Appendix 2. Certificate of Analysis & COC

I. Review of Phase I Environmental Site Assessment – July 2010

A Phase I Environmental Site Assessment performed by Nutshell Enterprises Ltd. (Nutshell), in July 2010, noted the following environmental records associated with the subject property (2 Executive Way).

- 1) The state of West Virginia has designated the subject property as a RCRA¹ site
- 2) The former subject property tenant, Kidde Fire Fighting, was a small quantity generator of hazardous wastes. The EPA² issued a civil penalty fine of \$24,923.00 to Kidde Fire Fighting for failure to file required annual reports of lead and copper analyses, for the year 2006; Kidde Fire Fighting ceased operations at 2 Executive Way in 2006.
- 3) EPA designated the subject property a RCRA corrective action site. A review of a *RCRA Corrective Action Site Progress Profile*, dated June 14, 2010, reports that the site has not been examined for corrective action, and 1) at this site, there is currently insufficient information to determine whether human exposures are under control, and 2) at this site, there is currently insufficient information to determine if migration of contaminated groundwater is under control

REC's³ noted on surrounding properties included:

The subject is in an area known as the Commerce Corridor, with fifteen significant Brownfield's properties located within a 1.5 mile corridor. The subject property is not listed as a Brownfield's site; two adjoining properties are Brownfield's sites.

REC's noted on adjoining properties:

Viener Property: 310 N George Street

Historical uses of property located at 310 N George Street include a junk shop, scrap yard, location of petroleum storage tanks, and proximity to active railroad line. Prior Phase II investigations have quantified historic surface soil contamination at this location; contamination of shallow surface soils included heavy metals, petroleum, PCB's and SVOC's; deeper contamination of petroleum hydrocarbons has also been documented.

332 N. George Street

The adjoining property located to the northeast of the subject property is the site of an active automotive repair business. A history of documented petroleum releases to the subsurface at 332 N. George St., has been documented.

¹ Resource Conservation Recovery Act

² Environmental Protection Agency

³ Recognized Environmental Concerns, as defined by American Society for Testing and Materials (ASTM) Standard E 1527-05 for Phase I reporting

II. Phase II Recommendations

Based on environmental records located and reviewed during the commission of the Phase I investigation, Nutshell recommended the following:

Subsurface Soil Investigation

Conduct shallow subsurface soil sampling in the immediate perimeter of the on-site buildings, to determine current soil conditions in this area. Plans are in place to surface the metal exterior of the walls (of the existing buildings) with either brick or decorative concrete. Footers will need to be excavated to a depth of at least 30-inches below ground surface (bgs), to add the decorative facade to the exterior walls. This activity offered an opportunity to examine the subsurface soils for manifested signs of contamination, such as staining and odors. In addition, soil samples could be collected and analyzed for targeted EPA regulated soil contaminants.

Indoor Air Quality Testing

Advance several shallow borings through the concrete slab of the buildings, to collect soil vapor samples, via a vacuum pump. Analyze the soil vapor samples for EPA regulated VOC's⁴. This recommendation was reviewed by Ms. Dawn Seeburger, a noted toxicologist who has worked on several area EPA Brownfield's assessments, and is familiar with the subject property.

III. Revision to Phase II Recommendations

After completion of the Phase I investigation and submittal of the report to the Client, the current property owner made available (to Nutshell) a former due diligence environmental assessment that was performed and detailed in a comprehensive report dated 11/30/2007. The 2007 report included prior reports of a lead cleanup project, and a subsurface investigation that was performed in November 1996, at the subject property.

Upon review (by Nutshell) of the previously unavailable reports and research and study of the former Maytag properties in the immediate area and on site, it was mutually agreed by Nutshell, the Seller and the Client to perform a minimal number of building perimeter soil borings and to collect samples to be analyzed for parameters that were not analyzed in the 2007 investigation: Total Petroleum Hydrocarbons-Diesel Range Organics (TPH-DRO); PAH's (semi-volatile organic compounds); VOC's.

Eight *shallow* soil borings will be advanced on the perimeter grounds of the large onsite building. Samples will be obtained at depths of 0.5 feet to 1.5 feet bgs and at 5-feet to 6-feet bgs.

⁴ Volatile Organic Compounds

Five *deep* soil borings will be advanced on the grounds. Soil samples will be collected and analyzed for the same parameters as stated above, with the addition of Total Metals.

It was mutually agreed by Nutshell and the Client that interior soil borings to collect vapor samples is not required, as interior soil samples were collected and analyzed during the 2007 investigation. No VOC's were detected in the samples. As no VOC's were present in the soil samples, vapor migration into the future workplace inside the buildings is not indicated.

IV. Subsurface Investigation – August 9, 2010

A direct-push, hydraulic rig was mobilized to the site on August 9, 2010, by licensed well drillers, B.L. Myers, to perform the soil borings. The boring locations (shallow & deep) were marked, making certain to avoid utilities that had been marked on site. Some previously selected boring locations were slightly re-located to avoid damage to shrubbery, or due to inability to access the location with the drilling equipment.

Shallow Borings – 4' bgs

Eight shallow soil borings (S-1, S-2, S-3, S-4, S-5, S-6, S-7, S-8) were each advanced to a depth of 4-feet bgs. Seven of the borings were sited on three sides of the large on-site building and one of the shallow borings (S-2) was advanced beside the smaller on-site tooling building.

Deep Borings – 8' bgs

Three deep soil borings (B-2, B-3, B-5) were each advanced to a depth of 8-feet bgs. Refusal was encountered in borings B-1 and B-4 at 3.5' bgs. The site appears to have heavy shallow concentrations of rock in many areas. Two attempts were necessary to advance borings B-1, B-3 and B-4. Four attempts were necessary to advance boring B-5.

The borings were sited near the property boundaries, in particular to the boundaries that adjoin properties with a known history of environmental subsurface contamination. Three of the borings (B-3, B-4, B-5) were sited in the asphalt parking lot, due to previous reports of a potential release in the area. These borings (B-3, B-4, B-5) were sited near the parking lot storm water catch basins, with knowledge that the pipe connection for the catch basin was buried more than 4-feet below grade, which meant that little stone should be encountered. Borings B-3 and B-5 could be advanced to 8-feet bgs, but boring B-4 encountered refusal at 3.5' bgs.

In-Field Soil Core Sample Screening

Soil boring core samples were screened, using a photo ionization detector (PID) to detect the presence of VOC's. Soil core samples were screened at every 1-foot interval of depth. The soil samples were obtained in an individual acetate sleeve which was opened in the

field and the soil contents were classified by the on-site geologist. The soil conditions are described in the attached Soil Sampling Data log.

Soil Sampling

A total of eight soil samples were collected from the deep borings B-1 through B-5.

Boring ID	# Samples Collected	Sample(s) ID	Depth Sample Collected (ft) (bgs)
B-1	1	B-1 S	0.5-1.5
B-2	2	B-2 S; B-2 D	0.5-1.5; 5-6
B-3	2	B-3 S; B-3 D	0.5-1.5; 5-6
B-4	1	B-4 S	0.5-1.5
B-5	2	B-5 S; B-5 D	0.5-1-5; 5-6

One composite sample was collected from each of the shallow soil borings, S-1 through S-8. The *shallow* samples were mixed to represent the entire depth of soil conditions.

Sampling Protocol

The samples were collected in laboratory-prepared containers, placed on ice and delivered to Caliber Analytical Laboratories, Towson, MD.

The *deep* borings samples were analyzed for Polycyclic Aromatic Hydrocarbons (PAH's), using EPA method 8270C; VOC's + fuel oxygenates, using EPA method 8260B; Total Phase Hydrocarbons-Diesel Range Organics (TPH-DRO), using EPA method 8015C, and Total Phase Hydrocarbons-High Range Organics (TPH-HRO)⁵.

The *shallow* borings samples were analyzed for Maryland Clean Fill Parameters⁶: Asbestos, using EPA method 600; Polychlorinated Biphenyls (PCB's), using EPA method 8082; Semi volatiles, using EPA method 8270C, VOC's + fuel oxygenates, using EPA method 8260B; Total Metals, using EPA method 6020A; TPH-DRO, using EPA method 8015C; Total Phase Hydrocarbon-Gasoline Range Organics (TPH-GRO), using EPA method 8015C.

Pesticides and herbicides analyses is also required to obtain Maryland "clean fill" status; however, based on the history of prior uses of the subject property (which do not indicate that these compounds would be expected to be present on the property) and the high cost of performing the analyses, these parameters were not investigated.

⁵ TPH-HRO (lube oil, hydraulic oil, used oil, etc.)

⁶ Parameters used by Maryland Department of the Environment to determine "clean soil" status as defined by the Voluntary Cleanup Sites or Brownfield's Sites.

V. Results

In-Field Screening: PID Results

Deep Soil Borings PID Results: B-1 through B-5

No PID results were recorded in borings B-1 or B-2.

Boring ID	Depth (bgs)	PID Result (ppm)
B-3	2	132
	4	63
B-4	1	377
	2	26.4
B-5	2	276
	3	42.8
	4	9.8

ppm = parts per million

Shallow Soil Borings PID Result: S-1 through S-8

No PID results were recorded in any of the shallow soil borings, except boring S-7.

Boring ID	Depth (bgs)	PID Result (ppm)
S-7	0.5	430
	1.5	141
	3.3	31.3

ppm = parts per million

VI. Observations & Conclusions

There are two appendices containing laboratory data resulting from the analysis of the soil samples. The synopsis chart prepared by the laboratory only identifies the parameters in each boring that had a detectable level of contamination. The laboratory does not specify whether the concentrations are below or above any recommended cleanup or exposure level, and are merely presented to indicate that there were contaminants encountered in some of the samples.

An analysis of the deeper boring analyses indicates that only one semi-volatile organic compound was found in the shallow samples taken in B-1 and B-2. Very low concentrations of TPH-DRO and TPH-HRO petroleum was encountered in shallow and deep samples in B-2, B-3 and B-5.

The shallow soil samples encountered levels of heavy metals, including arsenic, chromium, copper, lead, nickel, zinc, cadmium, beryllium, selenium and mercury. Asbestos was found in samples S-5 and S-8. PCB-Anaclor 1262 was found in samples S-5 and S-8.

TPH-DRO was found in samples S-5, S-6, S-7 and S-8. Several semi-volatile organic compounds (PAH's) were found in samples S-5, S-7 and S-8.

The individual sample analyses are contained in the enclosed Caliber Analytical Services Certificate of Analyses report, dated August 19, 2010, pages 1-56. The Chain-of-Custody forms are enclosed at the conclusion of the analytical report.

There are di minimus levels of several soil contaminants in the various samples; however a review and comparison of the analytical data with published EPA residential and non-residential soil cleanup standards indicates that there are very few samples that contain any levels of soil contamination that would be considered for abatement, removal, or encapsulation.

Samples S-2, S-3, S-4, S-5, S-7 and S-8 had elevated levels of arsenic, ranging from just above the published cleanup standard of 1.9 mg/kg for non-residential properties, to a

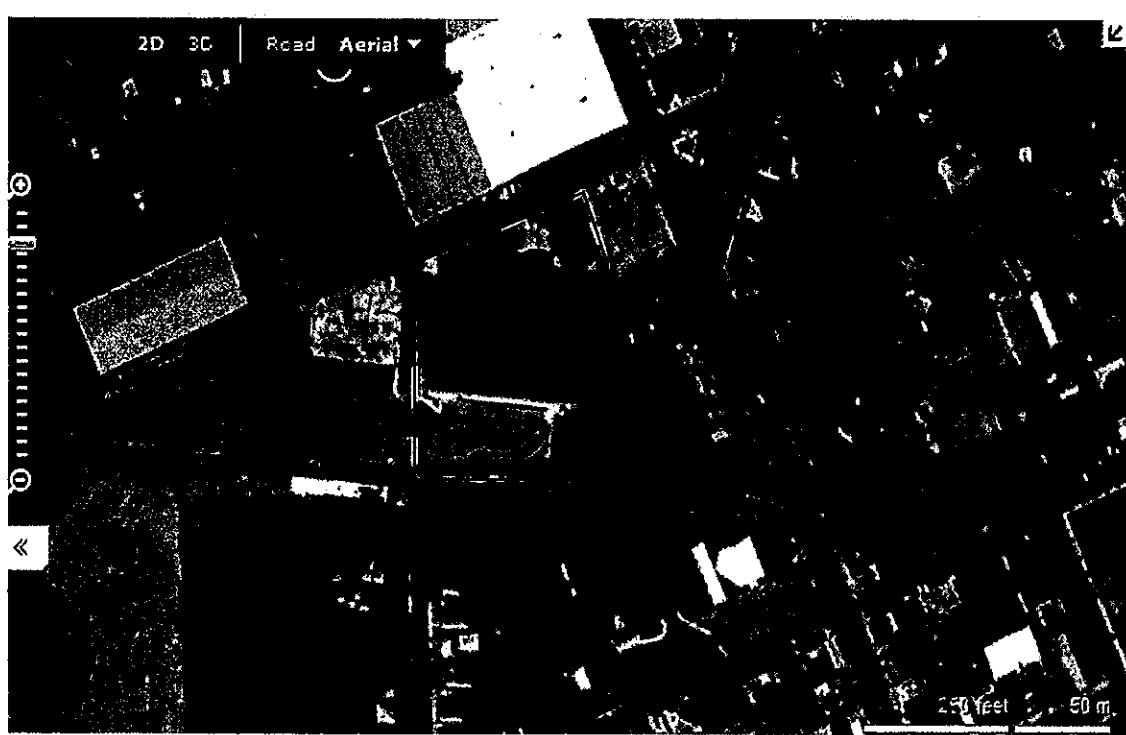

maximum of 12 mg/kg. It is noted that arsenic was encountered in the 2007 investigation, with many samples having higher levels than those encountered in the study. As arsenic is a naturally occurring element in soils, the levels encountered in this study are not to be considered as "contaminated", but are most probably the levels encountered in many soils in the nearby area.

Lead was encountered in sample S-8, near the front entrance on the southeast side of the building. The lead level of 1,400 mg/kg exceeds the published EPA standard of 1,000 mg/kg.

Minimum contamination was detected in any of the reference samples conducted in the perimeter and southern parking lot areas. Elevated levels of arsenic in many of the samples is interpreted as being typical background levels for the property and area.

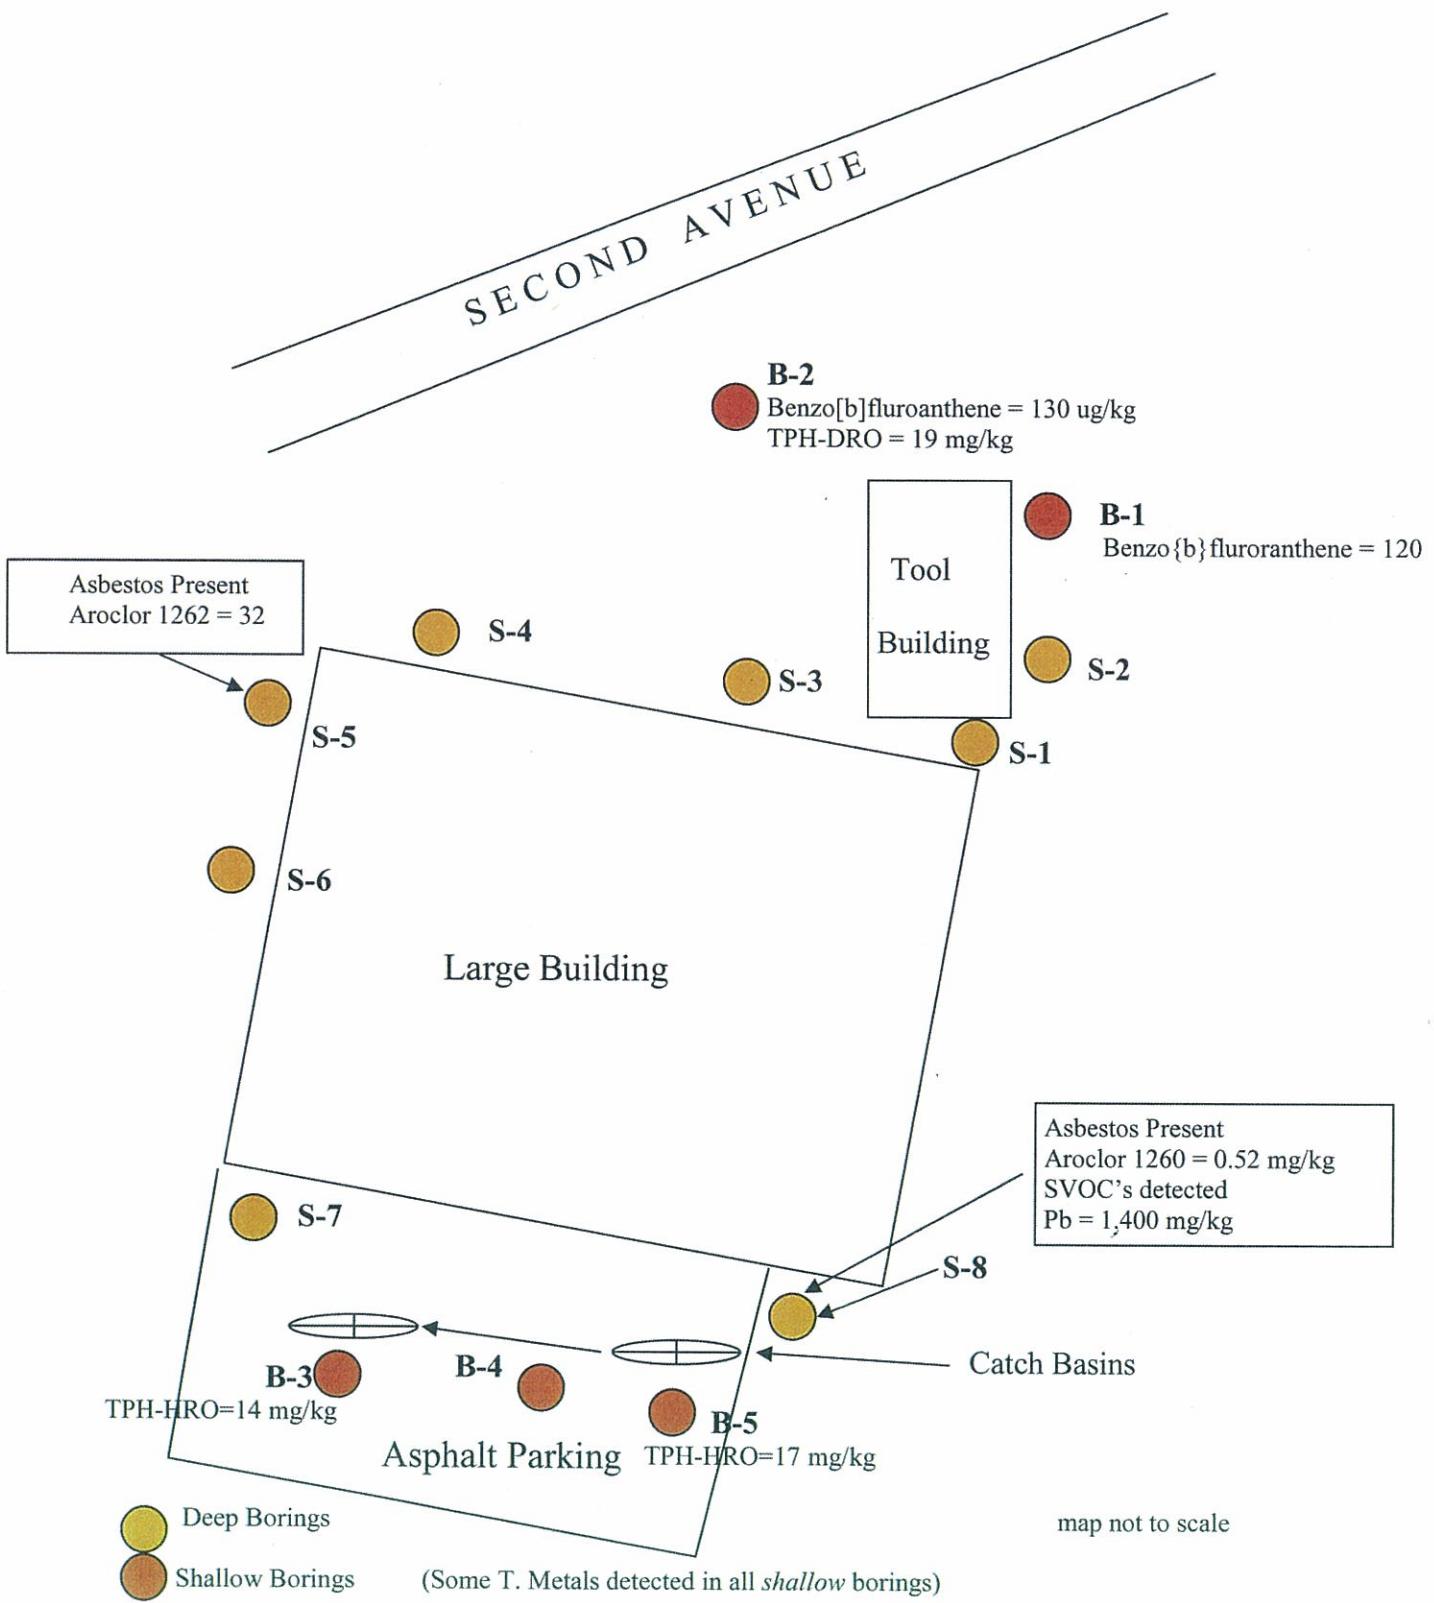

Lead was detected in one *shallow* sample. This non-typical result is most likely an outlier condition that is not typical of shallow or deeper soils on the property.

The analytical data indicates that there is *di minimus* levels of several regulated soil contaminants at this property. The shallow soil excavation around the perimeter of the building is not contaminated, and could be removed as normal soil during any future excavation.

Total Petroleum Hydrocarbons - (C10-C28) DRO									
Diesel Range Organics	ND	mg/kg	10	EPA 8015C	08/12/10	08/13/10 15:36	AC		
Total Petroleum Hydrocarbons - (C6-C10) GRO									
Gasoline Range Organics	ND	mg/kg	0.22	EPA 8015C	08/12/10	08/12/10 12:31	AC		

Notes/Qualifiers:

LLQ- Lowest Level of Quantitation

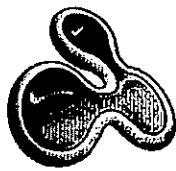

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Gasoline Range Organics	ND	mg/kg	0.27	EPA 8015C	08/12/10	08/12/10 12:57	AC	

Notes/Qualifiers:

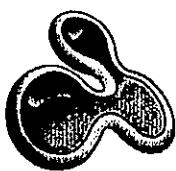

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

Notes/Qualifiers:

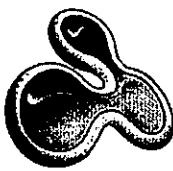

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Notes/Qualifiers:

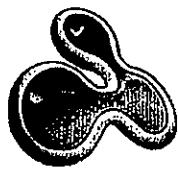

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

Total Petroleum Hydrocarbons - (C10-C28) DRO								
Diesel Range Organics	66	mg/kg	12	EPA 8015C	08/12/10	08/13/10 16:48	AC	
Total Petroleum Hydrocarbons - (C6-C10) GRO								
Gasoline Range Organics	ND	mg/kg	0.3	EPA 8015C	08/12/10	08/12/10 14:42	AC	

Notes/Qualifiers:

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

QC Chemist

Total Petroleum Hydrocarbons - (C10-C28) DRO					
Diesel Range Organics	25	mg/kg	11	EPA 8015C	08/12/10 08/13/10 16:48 AC
Total Petroleum Hydrocarbons - (C6-C10) GRO					
Gasoline Range Organics	ND	mg/kg	0.26	EPA 8015C	08/12/10 08/12/10 15:08 AC

Notes/Qualifiers:

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

QC Chemist

Total Petroleum Hydrocarbons - (C10-C28) DRO								
Diesel Range Organics	48	mg/kg	12	EPA 8015C	08/12/10	08/13/10 17:24	AC	
Total Petroleum Hydrocarbons - (C6-C10) GRO								
Gasoline Range Organics	ND	mg/kg	0.22	EPA 8015C	08/12/10	08/12/10 15:33	AC	

Notes/Qualifiers:

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

QC Chemist

Field Sample ID:	S-8	Matrix:	Soil	Lab ID:	10081002-16			
		Result	Unit	LLQ	Method	Prepared	Analyzed	Init.
Target Compound List - VOLATILES								
Isopropylbenzene	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,1,2,2-Tetrachloroethane	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,3-Dichlorobenzene	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,4-Dichlorobenzene	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,2-Dichlorobenzene	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,2-Dibromo-3-chloropropane	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
1,2,4-Trichlorobenzene	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
Ethyl t-butyl ether (ETBE)	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
tert-Butanol (TBA)	ND	ug/kg	27	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
Diisopropyl ether (DIPE)	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
tert-Amyl methyl ether (TAME)	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
tert-Amyl alcohol (TAA)	ND	ug/kg	27	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
tert-Amyl ethyl ether (TAEE)	ND	ug/kg	5	EPA 8260B	08/17/10	08/17/10 5:34	JKL	
Total Metals								
Antimony	ND	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Arsenic	5.3	mg/kg	0.48	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Beryllium	ND	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Cadmium	20	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Chromium	39	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Copper	1,300	mg/kg	24	EPA 6020A	08/12/10	08/13/10 13:34	MEL	
Lead	1,400	mg/kg	24	EPA 6020A	08/12/10	08/13/10 13:34	MEL	
Mercury	2.3	mg/kg	0.096	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Nickel	34	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Selenium	ND	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Silver	ND	mg/kg	2.4	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Thallium	ND	mg/kg	1.9	EPA 6020A	08/12/10	08/13/10 12:11	MEL	
Zinc	1,800	mg/kg	24	EPA 6020A	08/12/10	08/13/10 13:34	MEL	
Total Petroleum Hydrocarbons - (C10-C28) DRO								
Diesel Range Organics	280	mg/kg	11	EPA 8015C	08/12/10	08/13/10 17:24	AC	
Total Petroleum Hydrocarbons - (C6-C10) GRO								
Gasoline Range Organics	ND	mg/kg	0.26	EPA 8015C	08/12/10	08/12/10 15:59	AC	

Notes/Qualifiers:

LLQ- Lowest Level of Quantitation

ND - Not Detected at a concentration greater than or equal to the LLQ.

Results reported on a dry weight basis.

Approved by:

QC Chemist
