Charles Town, West Virginia 25414

RE: Bona Fide Prospective Purchaser Liability Protection Considerations
330 North George Street
Charles Town, Jefferson County, West Virginia
POTESTA Project No. 0101-25-0096-002

Dear Ms. Benites:

Potesta & Associates, Inc. (POTESTA) has prepared this document for the Jefferson County Commission (Commission) that discusses the conditions of Bona Fide Prospective Purchaser (BFPP) limitations of liability with respect to purchase and use of the above referenced property (site), per the United States Environmental Protection Agency's (USEPA) memorandum entitled *Superfund Liability Protections for Local Government Acquisitions after the Brownfields Utilization, Investment, and Local Development Act of 2018* (USEPA BFPP Memo), included as **Attachment A**.

BACKGROUND

POTESTA performed a Phase I Environmental Site Assessment (ESA) of the site and issued a report dated April 17, 2025. The Phase I ESA report identified the following Recognized Environmental Conditions (RECs) for the site:

- The presence of SVOCs, PCBs, and metals in site soil above Human Health Screening Levels.
- RECs identified by Gannett Fleming on the People's Supply sites (east adjoining property) combined with the southwest presumed groundwater flow direction.

Additionally, the following significant data gaps were identified:

- The lack of groundwater analysis combined with the presence of soil contamination at the subject property.
- The lack of soil analytical data for Parcel 12 combined with its historical use as an electric sub-station.

- The lack of confirmation sampling analytical data from the area at the subject property where contaminated soil had been placed and re-excavated during construction.

To assist the Commission in memorializing how they qualify and intend to comply with the requirements for BFPP status with respect to the RECs and data gaps identified at the property, POTESTA has drafted this document that discusses the following BFPP eligibility requirements and continuing obligations from the USEPA BFPP Memo, with respect to the Commission's plans for the site:

Eligibility Requirements:

1. *The person performed AAI into the previous ownership and uses of the property prior to acquisition; and*
2. *The person is not potentially liable for response costs at the property before the acquisition and has "no affiliation" with any other party that is potentially liable for response costs at the property.*

Continuing Obligations:

1. *Demonstrating that all disposal of hazardous substances occurred before the party acquired the property (no disposal after acquisition),*
2. *Complying with land use restrictions and not impeding the effectiveness or integrity of institutional controls,*
3. *Exercising appropriate care by taking "reasonable steps" to prevent the release of hazardous substances. These obligations are site-specific but may include stopping continuing releases, preventing threatened future releases, and/or limiting exposure to earlier hazardous substance releases. Institutional controls may play a critical role in complying with reasonable steps,*
4. *Providing full cooperation, assistance, and access to persons authorized to conduct response actions or natural resource restoration,*
5. *Complying with information requests and administrative subpoenas; and*
6. *Providing legally required notices.*

ASSUMPTIONS FOR THIS DISCUSSION

The site is mostly paved and/or covered by structure(s), with several small areas of landscaping and lawn, and unpaved areas along the southern border of the northern portion of the site (along the railroad tracks). It is served by public utilities including water and sewer. It is POTESTA's understanding that the Commission plans to use the existing building and facilities (parking lot, utilities, etc.) as an office complex, generally as-is. According to Commission representatives, there are no plans for renovations that involve significant excavation or breaching the existing pavement

or building footprint. It has been indicated that minor disturbance, such as installation of flag/light poles or signs is planned, but not significant disturbance.

It is assumed that most site workers will be indoor workers, and that typical outdoor work will be limited to the paved areas, or will involve above-grade landscaping/maintenance activities. It is also understood that the current owner of the site, 111 West Congress, LLC, acquired the site in 2009, around the time in which American Public University System (APUS) developed it for use as an academic institution.

DISCUSSION OF ELIGIBILITY REQUIREMENTS

Eligibility Requirement 1*: The person performed AAI into the previous ownership and uses of the property prior to acquisition.*

As discussed in the Background section above, POTESTA performed a Phase I ESA of the site and issued a report dated April 17, 2025. That Phase I ESA report is included as **Attachment B**. The Commission is designated as the User of that report.

The findings of the Phase I ESA identified the RECs and significant data gaps in the *Background* Section above and provide the basis for the Commission's (and POTESTA's) assumptions regarding the environmental conditions at the property in the development of this document.

Eligibility Requirement 2*: The person is not potentially liable for response costs at the property before the acquisition and has "no affiliation" with any other party that is potentially liable for response costs at the property.*

The current owner of the site is 111 West Congress, LLC, who purchased the site in 2009 around the time it was being redeveloped as an academic institution. Prior to that, the site was owned by various manufacturing entities. Other than the purchase of the site from the current owner, the Commission has no affiliation with these entities.

DISCUSSION OF CONTINUING OBLIGATIONS

Continuing Obligation 1*: Demonstrating that all disposal of hazardous substances occurred before the party acquired the property (no disposal after acquisition).*

As of the date of this document, the Commission has not acquired the property. The Commission's use of the site as an office complex is not expected to result in the disposal of hazardous substances on the site.

Continuing Obligation 2*: Complying with land use restrictions and not impeding the effectiveness or integrity of institutional controls.*

There are currently no land use restrictions or recorded institutional controls recorded for the site. However, it is understood that, with the exception of small landscaped areas and areas adjacent to the railroad tracks, the site is covered by either pavement or structures (which serve as a direct-contact cover). The site is served by public water with no known groundwater use. The applicability of these conditions is further discussed in the *Continuing Obligation 3* discussion below.

Continuing Obligation 3*: Exercising appropriate care by taking "reasonable steps" to prevent the release of hazardous substances. These obligations are site-specific but may include stopping continuing releases, preventing threatened future releases, and/or limiting exposure to earlier hazardous substance releases. Institutional controls may play a critical role in complying with reasonable steps.*

Based on the planned use of the property, the "reasonable steps" the Commission plans to take to prevent the release of hazardous substances is as follows (with respect to the above-referenced specific obligations):

- *Stopping continuing releases* – There are no identified continuing/ongoing releases at the site of which the Commission is aware.
- *Preventing threatened future releases* - It is not expected that continued use of the site as an office complex served by public water is likely to result in a future release. However, there is the potential for subgrade activities, such as construction or utility repairs or upgrades (or the above referenced plans for installation of poles and a sign), that could result in excavation of and exposure to impacted soil. To address these concerns, the Commission plans to provide prospective contractors with the *Soil Management/Health and Safety Plan for Subsurface Activities* (SMP/HASP), included as **Attachment C**.
- *Limiting exposure to earlier hazardous substance releases* – Given the conditions at the site, the potential for site worker or visitor exposure to contaminants is not likely. The pavement and buildings over most of the site prevent contact with surface and subsurface soil, and groundwater is not used. Based on the known conditions at the site, as well as the identified significant data gaps, the following is a discussion of the potential for human exposure at the site. This is not intended to represent a comprehensive conceptual site model (CSM) based on risk evaluation of a sufficient quantity of validated data suitable for a risk-based cleanup program such as WVDEP's Voluntary Remediation Program (VRP). It is presented herein for the purpose of demonstrating that the Commission has taken "reasonable steps":
    - Indoor site workers and visitors are not expected to be directly exposed to soil or groundwater.
    - Outdoor site workers and visitors/recreators may be exposed to surface soil, but given that the exposed areas of the site are likely either built up with topsoil (landscaped areas) or vegetated (lawns), or are along the railroad

tracks and expected to be infrequently occupied, the potential for ingestion or inhalation of contaminants is unlikely.

- Construction and utility workers' potential for exposure will be minimized using the procedures outlined in the SMP/HASP.
- Groundwater is not used at the site, making direct exposure unlikely.
- Please note that the lack of groundwater data is considered a significant data gap. Given that there is not the potential for direct contact with groundwater, vapor intrusion remains a potential pathway for exposure. However, based on the information available for the site and neighboring properties, there does not appear to be a significant source of volatile organic compound (VOC) contamination at or in the vicinity of the site that would necessitate further evaluation of this potential exposure pathway. Should information become available that indicates a need, the Commission would consider options for assessment.

Continuing Obligation 4*: Providing full cooperation, assistance, and access to persons authorized to conduct response actions or natural resource restoration.*

The Commission would provide cooperation with response or restoration/remediation activities as necessary.

Continuing Obligation 5*: Complying with information requests and administrative subpoenas.*

The Commission intends to comply should this be necessary.

Continuing Obligation 6*: Providing legally required notices.*

While there are currently no legally required notices of which the Commission is aware related to the REC and significant data gaps identified at the site, the Commission will fulfill this obligation should it become required.

CONCLUSION

Per the USEPA BFPP Memo, "*the BFPP protection is self-implementing but requires parties – including local governments – to demonstrate they have met the statute's pre-acquisition 'threshold criteria' and post-acquisition 'continuing obligations' . . .".* The Commission believes that, based on the available information, its plans for the site, and the considerations outlined herein, that the requirements for BFPP liability protection are satisfied. If information becomes available indicating that one of the eligibility requirements or continuing obligations is not being satisfied, the Commission will respond accordingly.

CLOSING

This report has been prepared to assist the Commission in evaluating and planning with respect to the subject site. POTESTA's understanding of the site conditions as discernible from information provided by others and obtained by POTESTA using the methods specified. POTESTA assumes no responsibility for information provided or developed by others or for documenting conditions detectable with methods or techniques not specified in the scope of services. In addition, no activity, including sampling, assessment or evaluation of material or substance, may be assumed to be included in this evaluation unless specifically referenced in this report. If additional data concerning this site become available, POTESTA should be informed so that we may examine the information and, if necessary, modify this report accordingly.

If you have any questions, or require additional information, please contact our office.

Sincerely,

POTESTA & ASSOCIATES, INC.

David J. Corsaro, LRS
Senior Scientist

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C., 20460

OFFICE OF
ENFORCEMENT AND
COMPLIANCE ASSURANCE

MEMORANDUM

SUBJECT: Superfund Liability Protections for Local Government Acquisitions after the Brownfields Utilization, Investment, and Local Development Act of 2018

FROM: Cynthia L. Mackey, Director
Office of Site Remediation Enforcement

CYNTHIA MACKEY
Digitally signed by CYNTHIA MACKEY
Date: 2020.06.15 14:42:38 -04'00'

TO: Regional Counsels, Regions 1-10
Superfund National Program Managers, Regions 1-10

I. Purpose

Local governments[1] often play an important role in facilitating the cleanup and redevelopment of properties contaminated by hazardous substances. By acquiring ownership or control or supporting the transfer of ownership of contaminated properties, local governments have an opportunity to evaluate and assess public safety needs and promote redevelopment projects that will protect and improve the health, environment, and economic well-being of their communities. The EPA often works with and assists local governments to facilitate the cleanup and revitalization of contaminated properties in their communities.[2]

Often, however, local governments perceive the potential liability for cleanup costs under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, (CERCLA, commonly known as "Superfund") as an impediment to the acquisition of contaminated properties.[3] In 2018, Congress addressed this concern by enacting the Brownfields Utilization,

[1] Many of the references to "local governments" in this document and to CERCLA's liability protections are also applicable to state governments.
[2] For more information visit the EPA's Land Revitalization website at https://www.epa.gov/land-revitalization. Local governments considering the acquisition of contaminated property should review the EPA's *Process for Risk Evaluation, Property Analysis and Reuse Decisions for Local Governments Considering the Reuse of Contaminated Properties* on the Agency's website at https://www.epa.gov/land-revitalization/prepared.
[3] 42 U.S.C. §§ 9601, *et seq*. A local government also may have obligations and/or be potentially liable under other environmental statutes such as the Resource Conservation and Recovery Act (RCRA), 42 U.S.C. §§ 6901 *et seq*. or state laws.

Investment, and Local Development Act of 2018 (BUILD Act).[4] The BUILD Act amended CERCLA's Section 101(20)(D) liability protection for state and local government acquisitions of contaminated property by adding a new category of exempt acquisitions and by removing a requirement that the properties must be acquired "involuntarily."

To assist local governments, this guidance provides an overview of CERCLA's liability framework and protections and the EPA's enforcement discretion policies that may apply to local governments. In addition, the EPA is clarifying its intentions by describing circumstances when it may exercise its enforcement discretion to not pursue enforcement actions against certain parties that may fall within a category of liable parties under Section 107 of CERCLA.[5] The EPA's enforcement discretion is limited to the unique circumstances of each case and does not protect against third-party suits.[6] Courts, not the EPA, are the final arbiters of whether a party achieves liability protection. This guidance supersedes the EPA fact sheet titled *CERCLA Liability and Local Government Acquisitions and Other Activities.*[7]

II. Local Government Involvement at Contaminated Properties

Local governments may become involved with contaminated properties in a number of ways, many of which present opportunities to facilitate cleanup or redevelopment. Depending on the type and manner of involvement, the local government may be concerned with potential liability under CERCLA.

Prior to acquiring ownership or control of a potentially contaminated property, all parties, including local governments, are strongly encouraged to perform an environmental site assessment, such as "all appropriate inquiries" (AAI),[8] to ensure they make informed decisions regarding the property's environmental conditions. This information can help a local government ensure that its activities do not disturb or exacerbate site contamination. This information also can help to preserve its ability to satisfy certain federal or state liability protections.

---

[4] Brownfields Utilization, Investment, and Local Development Act of 2018, Division N of Pub. L. No. 115-141, 132 Stat. 1052 (March 23, 2018).

[5] This guidance is reflected in the EPA's *Revitalization Handbook: Addressing Liability Concerns at Contaminated Properties* available on the Agency's website at https://www.epa.gov/enforcement/revitalization-handbook. The Revitalization Handbook provides an overview of many of the potential liability issues arising under CERCLA and other statutes associated with the assessment, cleanup, and revitalization of contaminated properties.

[6] Property transactions with PRPs that the EPA deems are intended to interfere with CERCLA's liability scheme are not eligible for the EPA's enforcement discretion.

[7] Office of Site Remediation Enforcement, March 2011.

[8] All appropriate inquiries (AAI) is a process of evaluating a property's environmental conditions and assessing the likelihood of any contamination. Parties must conduct AAI before acquiring property to obtain certain liability protections discussed in Paragraphs IV.B. and C. below. For more information please see the Agency's Brownfields All Appropriate Inquiries website at https://www.epa.gov/brownfields/brownfields-all-appropriate-inquiries.

SOME POTENTIAL AVENUES FOR LOCAL GOVERNMENT INVOLVEMENT AT CONTAMINATED PROPERTIES

- Promoting redevelopment through municipal incentives such as zoning and use exemptions, tax increment financing, and infrastructure improvements
- Responding to emergencies and potential public health, safety, and environmental hazards
- Foreclosing on and transferring tax-delinquent properties
- Collaborating with a current owner to obtain access, investigate, clean up, and redevelop property
- Acquiring property and "simultaneously" or subsequently transferring it to a third party
- Utilizing a "land bank" or redevelopment agency to acquire, hold, lease, and/or control vacant, abandoned, and tax delinquent properties
- Acquiring property for short-term and long-term use or redevelopment
- Enforcing zoning and building codes and planning future land use
- Performing demolition, site assessment, investigation, and cleanup activities
- Securing property access and institutional controls such as deed restrictions, environmental covenants, and land use controls
- Participating in public meetings concerning the site property

The EPA recommends that local governments refer to the statutory language of CERCLA, the regulations at 40 C.F.R. Parts 300, 310, and 312, and relevant EPA documents (referenced throughout this guidance) prior to taking any action to acquire ownership or control, or to clean up or redevelop contaminated property. Local governments also should consult with the appropriate state environmental agency and their own legal counsel. Additionally, the EPA's regional offices may be able to provide information and assistance to local governments considering the acquisition of contaminated property.

III. Overview of CERCLA

CERCLA was enacted in 1980 in response to public concern about abandoned hazardous waste sites. CERCLA authorizes the federal government to assess and/or clean up contaminated sites and provides authority for responding to releases or threatened releases of hazardous substances, pollutants, and contaminants.

CERCLA established a comprehensive liability scheme enabling the EPA to order certain categories of parties to conduct or pay for the cleanup of releases or threatened releases of hazardous substances. The EPA may exercise its response authority through removal, remedial, and enforcement actions. The National Oil and Hazardous Substances Contingency Plan (NCP), 40 C.F.R. Part 300, provides the "blueprint" for conducting removal and remedial actions under CERCLA. Consistent with the NCP, remedial actions financed by the Hazardous Substance Superfund Trust Fund ("Fund") are undertaken only at sites on the EPA's National Priorities List (NPL).

There are many different types of contaminated or potentially contaminated properties subject to CERCLA in the United States. Some may be "Superfund sites" – sites where the federal government is, or plans to be, involved in cleanup efforts. Many of these sites are listed on the NPL. Other properties may be "brownfield sites" – properties where "the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant." CERCLA also includes authority for the EPA to provide grant funding for the assessment and cleanup of brownfield sites. Many of the properties that local governments may be interested in acquiring may qualify as brownfield sites. The level of contamination may vary and generally, the cleanup of brownfield sites is less complex than at Superfund sites. State and tribal response programs play a significant role in overseeing the cleanup and revitalization of brownfield sites.

Under CERCLA § 107(a), the following categories of persons may be considered potentially responsible parties (PRPs) and held liable for the costs or performance of a cleanup under CERCLA to address releases or threatened releases of hazardous substances:

- The owner or operator of the facility;
- Any person who owned or operated any facility at the time of disposal of any hazardous substance;
- Any person who arranged for the disposal or treatment, or transport for the disposal or treatment, of a hazardous substance at any facility; or
- Any person who accepted any hazardous substance for transport to a disposal or treatment facility that such person selected.

CERCLA's liability scheme helps to ensure that wherever possible, PRPs, rather than the general public, pay for cleanups. Under CERCLA, a PRP's liability for cleanup is interpreted as:

- Strict – A party is liable if it falls within one of the four categories of parties in CERCLA § 107(a) regardless of whether the party was at fault or negligent, or the party's conduct was in compliance with industry standards;
- Joint and Several – If two or more parties are liable for the contamination at a site, any one or more of the parties may be held liable to the government for the entire cost of the cleanup, regardless of its contribution to the site, unless a party can show that the injury or harm at the site is divisible; and
- Retroactive – A party may be held liable even if the hazardous substance disposal occurred before CERCLA was enacted in 1980.

IV. CERCLA Liability Protections for Acquisition of Contaminated Property

Although a local government may fall into one of the classes of PRPs described above, there are liability protections that may apply to local government acquisitions of contaminated property. These protections and the EPA's enforcement discretion documents that may apply are addressed below and in Appendices A and B.

The CERCLA liability protections that may apply to local government acquisitions of contaminated property include:

- CERCLA § 101(20)(D) exempts certain units of local government from the definition of "owner or operator" under specified circumstances.

- CERCLA §§ 101(40) and 107(r)(1) offer liability protection from "owner or operator" liability to parties that acquire a contaminated property with knowledge of the contamination and achieve and maintain their status as bona fide prospective purchasers (BFPPs).
- CERCLA §§ 107(b)(3) and 101(35)(A) provide liability protection to parties that acquire contaminated property and meet the third-party defense requirements and the innocent landowner (ILO) criteria set forth in those sections.

The method or type of property acquisition by a local government will play a critical role in the application of CERCLA liability protections. If it is unclear whether a particular liability protection may apply, a local government may consider increasing the likelihood that it will not be deemed liable by layering the available CERCLA liability protections. It is important to note that the Section 101(20)(D) exemption and BFPP liability protection do not shield government entities from any potential liability that they may have as "arrangers" or "transporters" of hazardous substances under CERCLA.

A. Section 101(20)(D) State and Local Government Liability Exemption

CERCLA § 101(20)(D), as amended by the BUILD Act, provides liability protection to state and local governments that acquire ownership or control of a contaminated property; however, it does not permanently or unconditionally insulate a government entity from potential CERCLA liability. Rather, CERCLA § 101(20)(D) provides a non-exhaustive list of examples of acquisition methods that may exempt local governments from potential liability as an "owner" or "operator" under CERCLA under certain circumstances. The BUILD Act amended CERCLA § 101(20)(D) to add a new category of exempt property acquisitions, "through seizure or otherwise in connection with law enforcement activity," and to remove the requirement that state and local governments must acquire title to property "involuntarily." CERCLA § 101(20)(D) now provides that "a unit of State or local government which acquired ownership or control through seizure or otherwise in connection with law enforcement activity, or through bankruptcy, tax delinquency, abandonment or other circumstances in which the government acquires title by virtue of its function as sovereign" is exempt from the definition of "owner or operator" if that government entity did not cause or contribute to the release or threatened release.

STATUTORY LANGUAGE -- CERCLA § 101(20)(D) LIABILITY EXEMPTION

The term "owner or operator" does not include a unit of State or local government which acquired ownership or control through seizure or otherwise in connection with law enforcement activity, or through bankruptcy, tax delinquency, abandonment or other circumstances in which the government acquires title by virtue of its function as sovereign.

The exclusion provided under this paragraph shall not apply to any State or local government which has caused or contributed to the release or threatened release of a hazardous substance from the facility, and such a State or local government shall be subject to the provisions of this Act in the same manner and to the same extent, both procedurally and substantively, as any nongovernmental entity, including liability under section 107.

While the BUILD Act provides clarity on some of the types of local government acquisitions exempt from liability, local governments may continue to have questions about the BUILD Act amendments. The EPA intends to assist local governments by clarifying when it will exercise its enforcement discretion on a number of acquisition-related issues discussed below.

The Section 101(20)(D) exemption from "owner or operator" liability does not apply if that government "has caused or contributed to the release or threatened release of a hazardous substance from the facility." For example, some actions or omissions during ownership (such as dispersing contaminated soil during excavation and grading and failing to prevent the release of hazardous substances) may cause or contribute to a release of hazardous substances from a property and make the local government ineligible for the exemption.[9]

In cases where it is unclear whether the Section 101(20)(D) exemption applies – or when a local government wishes to obtain additional liability protection – the EPA encourages local governments to achieve and maintain BFPP status pursuant to CERCLA §§ 101(40) and 107(r).

1. "Unit of State or Local Government"

Many state and local governments have created entities to promote the acquisition, redevelopment, and reuse of abandoned properties. These entities often are established as redevelopment authorities or land banks. Other entities may include, but are not limited to, community development agencies and special districts. Generally speaking, redevelopment authorities are created to use significant governmental powers to develop or redevelop particular properties for a particular purpose. In contrast, land banks are created to acquire the growing number of privately or public-owned urban parcels that are not being reclaimed or redeveloped by market forces. The EPA recognizes the importance and increased use of these entities as tools to address vacant and potentially contaminated properties, improve existing land use practices, and support local community development.

The EPA is clarifying its enforcement intentions regarding CERCLA § 101(20)(D)'s use of the undefined term "unit of State or local government." The EPA generally intends to treat any entity that meets the definition of "local government" found in the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, 2 C.F.R. Part 200, ("Grant Regulations")[10] as a "unit of State or local government" under CERCLA § 101(20)(D). The Grant Regulations define "local government" to mean any unit of government within a state, including a: (a) county; (b) borough; (c) municipality; (d) city; (e) town; (f) township; (g) parish;

[9] For additional discussion of post-acquisition activities that may or may not be considered releases under CERCLA, see the disposal discussion beginning on page 8 of the EPA's *Enforcement Discretion Guidance Regarding Statutory Criteria for Those Who May Qualify as CERCLA Bona Fide Prospective Purchasers, Contiguous Property Owners, or Innocent Landowners* ("Common Elements Guidance") (Office of Enforcement and Compliance Assurance, July 29, 2019) available on the Agency's website at https://www.epa.gov/enforcement/common-elements-guidance.

[10] 2 C.F.R. 200.64.

(h) local public authority, including any public housing agency under the United States Housing Act of 1937;[11] (i) special district; (j) school district; (k) intrastate district; (l) council of governments, whether or not incorporated as a nonprofit corporation under state law; and (m) any other agency or instrumentality of a multi-regional or multi-intrastate local government.[12]

Although the Grant Regulations do not expressly include a redevelopment authority, land bank, or community development agency within its definition of "local government," the EPA generally intends to treat such entities as a "unit of State or local government" under CERCLA § 101(20)(D). Any entity that is uncertain whether it meets the Grants Regulations definition may want to consult the appropriate state or local government for a legal opinion on the matter.

2. "By Virtue of its Function as Sovereign"

The CERCLA § 101(20)(D) exemption from owner or operator liability includes other circumstances in which the local government acquires title to property "by virtue of its function as sovereign." This phrase is undefined. To provide clarity to local governments, the EPA generally intends to exercise its enforcement discretion and treat a local government acquisition as "by virtue of its function as sovereign" only when the government acquires title to the property by exercising a uniquely governmental authority via a function that is unique to its status as a governmental body. In other words, the EPA expects to use its enforcement discretion when a local government acquires title to a property via a function that can only be effectively performed by governments using a mechanism only available to governments. Such uniquely governmental functions and specific limitations on the EPA's enforcement discretion are discussed below.

COMMON GOVERNMENTAL PROPERTY ACQUISITIONS BY VIRTUE OF ITS FUNCTION AS SOVEREIGN

- Tax delinquency and tax lien foreclosures
- Some transfers between governmental units
- Tax increment financing transactions
- Escheat
- Eminent domain authority for a public use
- Holding an unexercised right of way
- Demolition lien foreclosure
- Foreclosure while administering a government loan, loan guarantee, or loan insurance program
- Acting as a conservator or receiver under a clear and statutory mandate or regulatory authority

[11] 42 U.S.C. §§ 1437, *et seq*.
[12] 2 C.F.R. § 200.64.

a. Acquisition Through Purchase, Inheritance, Bequest, Gift, or Donation

The EPA does not intend to exercise its enforcement discretion under CERCLA for acquisitions of title to property by local governments through purchase, inheritance, bequest, gift, or donation. The BUILD Act amendments removed the term "involuntary" from CERCLA § 101(20)(D); however, voluntary acquisitions such as these were not among the governmental acquisition methods expressly added to CERCLA § 101(20)(D) by the BUILD Act. These methods of acquisition are available to private parties and are not uniquely governmental and, therefore, the EPA does not intend to treat them as "by virtue of its function as sovereign" acquisitions.[13]

Local governments seeking to acquire title to property through purchase, inheritance, bequest, gift, or donation should consider the availability of other liability protections, such as the BFPP liability protection under Sections 101(40) and 107(r)(1). In limited circumstances, local governments also may be eligible for the innocent landowner defense under Sections 107(b)(3) and 101(35)(A)(ii). The criteria for establishing these liability protections is discussed in Paragraphs IV.B. and IV.C. below.

b. Acquisition by Transfer between Government Entities

CERCLA § 101(20)(D) does not address the acquisition of title to a contaminated property that is transferred from one government entity to another. A common example of such a transfer is when a city or county acquires the title of a tax delinquent property through tax lien foreclosure and then transfers it through a quit claim deed to a redevelopment authority, land bank, or other local government entity.

To assist local governments, the EPA is clarifying how it intends to exercise its enforcement discretion regarding the applicability of CERCLA § 101(20)(D) to intergovernmental property transfers. The EPA generally intends to treat the transferee of an intergovernmental property transfer as having acquired the title "by virtue of its function as sovereign" under CERCLA § 101(20)(D) in certain circumstances. These include when a governmental transferee acquires title to the property by exercising a uniquely governmental authority via a function that is unique to its status as a governmental body. A common example is when a land bank's enabling statute provides that conveyances of foreclosed tax delinquent properties by a city or county to the land bank are "intergovernmental transfers" in order to exempt them from disposition requirements that may apply to transfers to private parties (*e.g.*, a requirement to use a public auction or public bidding for local government property transfers). The EPA intends to exercise its enforcement discretion in this circumstance provided the transferor and transferee have not caused or contributed to a release or threatened release and are not otherwise potentially liable under CERCLA (*e.g.,* as an arranger or transporter).

[13] There may be limited situations where government entities acquire title to property through purchase, inheritance, bequest, gift or donation in a way that also may be through the exercise of a uniquely governmental authority. For instance, a government entity may exercise a uniquely governmental authority to purchase property through Tax Increment Financing to make public improvements to the property through the use of property taxes. In these limited situations, the EPA intends to exercise its enforcement discretion to treat such acquisitions as "by virtue of its function as sovereign" under Section 101(20)(D).

Property transactions with PRPs and transfers of property that the EPA deems are intended to interfere with CERCLA's liability scheme are not eligible for the EPA's enforcement discretion. A local government transferee should consider obtaining BFPP or innocent landowner status prior to the transfer of a contaminated property if it is uncertain whether it is eligible for the Section 101(20)(D) liability exemption or the EPA's enforcement discretion. The BFPP liability protection, the innocent landowner defense, and the exercise of the EPA's enforcement discretion in transfer situations, are discussed in Paragraphs IV.B. and IV.C. below.

c. Acquisition by Escheat

Escheat is the reversion of private property to a government in the absence of legal claimants or heirs. CERCLA § 101(35)(A)(ii) addresses escheat; however, Section 101(20)(D) does not. Notwithstanding, escheat is a method of acquisition that occurs pursuant to the exercise of a uniquely governmental authority and via a function that is unique to a government entity's status as a governmental body. Consistent with its long-standing policy, the EPA generally intends to exercise its enforcement discretion to treat escheat as an acquisition of title that is "by virtue of its function as sovereign" and exempt from the definition of "owner or operator under Section 101(20)(D).[14] A local government that acquires title to a property by escheat may also be able to establish the innocent landowner defense under Sections 107(b)(3) and 101(35)(A)(ii) of CERCLA. This defense is discussed in Paragraph IV.C. below.

d. Acquisition Through the Exercise of Eminent Domain Authority

Eminent domain is the power of a government to take property from a private party and provide compensation. It can be used to acquire property for public uses and, in some instances, for private economic development. This authority is sometimes initiated and exercised in conjunction with other authorities to use or address contaminated property. The innocent landowner defense in CERCLA § 101(35)(A)(ii) addresses government acquisition "through the exercise of eminent domain authority by purchase or condemnation."[15] The BFPP liability protection also may be available to a local government that acquires property through the exercise of eminent domain authority.

CERCLA § 101(20)(D) does not address the exercise of eminent domain authority. The EPA generally intends to exercise its enforcement discretion to treat the exercise of eminent domain authority for a public use as an acquisition of title "by virtue of its function of sovereign" under Section 101(20)(D). Examples of eminent domain acquisitions for a public use may include, but are not limited to, parks, recreation, and civic buildings and areas to serve the general public; mass transit, infrastructure, and utility projects to serve the general public; and projects to address a threat to public health, safety, and the environment. Although it is not binding upon the EPA, the limitations on the use of funds for eminent domain in the Transportation, Housing and Urban Development, and Related Agencies Appropriations Act of 2018 informs the EPA's

[14] See *Municipal Immunity from CERCLA Liability for Property Acquired through Involuntary State Action* (October 20, 1995), at 5. Available on the Agency's website at https://www.epa.gov/enforcement/guidance-municipal-immunity-cercla-liability-property-acquired-through-involuntary-state.

[15] CERCLA §§ 101(35)(A)(ii) and 107(b)(3), 42 U.S.C. §§ 9601(35)(A)(ii) and 9607(b)(3) includes several requirements, including the exercise of due care, that a government entity must meet to establish the defense.

exercise of its enforcement discretion for the eminent domain authority for public use and also may be of relevance to local government entities considering such an acquisition.[16]

The EPA generally does not intend to exercise its enforcement discretion to treat eminent domain acquisitions of title for economic development that primarily benefits private entities as "by virtue of its function as sovereign" under CERCLA § 101(20)(D). A local government that acquires a title to property through the use of eminent domain authority for public use or economic development that primarily benefits private entities may still be able to establish the BFPP liability protection under Sections 101(40) and 107(r) or the innocent landowner defense under Sections 107(b)(3) and 101(35)(A)(ii). These liability protections are discussed in Paragraphs IV.B. and IV.C. below.

B. Bona Fide Prospective Purchaser Protection

The BFPP liability protection in CERCLA §§ 101(40) and 107(r)(1) may be available for a local government that purchases or leases contaminated property if it establishes its BFPP status prior to acquisition and maintains its BFPP status after acquisition. The BFPP protection is self-implementing but requires parties – including local governments – to demonstrate they have met the statute's pre-acquisition "threshold criteria" and post-acquisition "continuing obligations"[17] described below. As another basis for liability protection, the EPA generally encourages local governments to consider layering their available liability protections and to establish and maintain BFPP status even when another liability protection may apply.

Under CERCLA §§ 101(40) and 107(r)(1), a BFPP is a person who acquires ownership of or a leasehold interest in a property after January 11, 2002, and meets the following threshold criteria:

- The person performed AAI into the previous ownership and uses of the property prior to acquisition; and
- The person is not potentially liable for response costs at the property before the acquisition and has "no affiliation" with any other party that is potentially liable for response costs at the property.

CERCLA § 101(40)(B) provides additional continuing obligations criteria for maintaining BFPP status after property acquisition, including:

- Demonstrating that all disposal of hazardous substances occurred before the party acquired the property (no disposal after acquisition);

[16] Section 407 of the ''Transportation, Housing and Urban Development, and Related Agencies Appropriations Act, 2018," Division L, Pub. L. No. 115-141, 132 Stat. 971, limits the use of funds for eminent domain as follows: "[p]ublic use shall not be construed to include economic development that primarily benefits private entities: Provided further, That any use of funds for mass transit, railroad, airport, seaport or highway projects, as well as utility projects which benefit or serve the general public (including energy-related, communication-related, water-related and wastewater-related infrastructure), other structures designated for use by the general public or which have other common-carrier or public-utility functions that serve the general public and are subject to regulation and oversight by the government, and projects for the removal of an immediate threat to public health and safety or brownfields as defined in the Small Business Liability Relief and Brownfields Revitalization Act (Pub. L. No. 107–118, 115 Stat. 2356 (2002)) shall be considered a public use for purposes of eminent domain."

[17] See Common Elements Guidance, *supra* note 10, at 5.

- Complying with land use restrictions and not impeding the effectiveness or integrity of institutional controls (discussed further in Paragraph V.C. below);
- Exercising appropriate care by taking "reasonable steps" to prevent the release of hazardous substances. These obligations are site-specific but may include stopping continuing releases, preventing threatened future releases, and/or limiting exposure to earlier hazardous substance releases. Institutional controls may play a critical role in complying with reasonable steps;
- Providing full cooperation, assistance, and access to persons authorized to conduct response actions or natural resource restoration;
- Complying with information requests and administrative subpoenas; and
- Providing legally required notices.

To remain protected from CERCLA liability for the existing contamination while it owns the property, a local government must maintain its BFPP status for as long as the potential for liability exists. Potential liability depends on the site-specific factors including the nature and extent of the hazardous substances, the potential for exposure leading to unacceptable human health and/or ecological risk, and the nature and timing of any response action that the EPA or other parties have performed or may perform in the future. Also, it is important to note that a local government may become liable for any disposals after acquisition.[18]

BFPPs that continue to meet the criteria in CERCLA §§ 101(40) and 107(r) are not liable as owners or operators for CERCLA response costs, but the property they acquire may be subject to a windfall lien when an EPA response action has increased the fair market value of the property.[19] The United States, after spending taxpayer money for cleanup at a property, may place a windfall lien on the property for the lesser of the unrecovered response costs or the increase in fair market value at the property attributable to the Superfund cleanup.[20]

Consistent with the discussion above in Paragraph IV.A.2.b., the EPA generally intends to exercise its enforcement discretion regarding certain intergovernmental transfers of property. If a government entity transferring a property has fulfilled the requirements to achieve and maintain BFPP status pursuant to CERCLA §§ 101(40) and 107(r), the EPA generally intends to treat the

[18] See Common Elements Guidance, *supra* note 10, at 8.

[19] CERCLA contains two sections under which federal liens arise. This document only discusses windfall liens under CERCLA § 107(r), 42 U.S.C. § 9607(r), and does not discuss liens for unrecovered response costs under CERCLA § 107(*l*), 42 U.S.C. § 9607(*l)*. For more information on CERCLA § 107(*l*) liens, please see *Use of Federal Superfund Liens to Secure Response Costs* (May 8, 2002), available on the Agency's website at: https://www.epa.gov/enforcement/guidance-using-federal-superfund-liens-secure-response-costs.

[20] The windfall lien provision is found in CERCLA § 107(r), 42 U.S.C. § 9607(r). The EPA anticipates that there may be situations where a site has a windfall lien and a BFPP wants to satisfy any existing or potential windfall lien before or close to the time of acquisition. The EPA and the Department of Justice jointly issued the *Interim Enforcement Discretion Policy Concerning "Windfall Liens" Under Section 107(r)* of CERCLA (July 16, 2003), available at https://www.epa.gov/enforcement/interim-guidance-enforcement-discretion-concerning-windfall-liens-cercla-section-107r which includes a model agreement to facilitate resolution of windfall liens. The policy also provides guidance on how the EPA intends to perfect specific windfall liens and when the EPA may or may not seek to foreclose on windfall liens.

government transferee as within the scope of the BFPP liability protection, even if the transferee does not perform AAI prior to the transfer. In this scenario, the transferee must still achieve and maintain BFPP status pursuant to CERCLA §§ 101(40) and 107(r).[21]

C. Third Party and Innocent Landowner Defenses

CERCLA § 107(b)(3) provides a "third party" affirmative defense to CERCLA liability for any owner, including a local government, that can prove, by a preponderance of the evidence, that the contamination was caused solely by an act or omission of a third party whose act or omission did not occur "in connection with a contractual relationship." An entity asserting CERCLA § 107(b)(3) status also must show that it exercised due care with respect to the contamination and that it took precautions against foreseeable acts or omissions, and the consequences thereof, by the third party that caused the contamination.

CERCLA's third-party defense also includes an "innocent landowner defense" as an exclusion to the definition of a "contractual relationship" in Section 101(35). The "innocent landowner defense" applies to entities that meet the criteria set forth in CERCLA §§ 101(35) and 107(b)(3). CERCLA § 101(35)(A) sets forth a definition of innocent landowner that includes "a government which acquired the facility by escheat, or through any other involuntary transfers or acquisition, or through the exercise of eminent domain authority by purchase or condemnation." Although the EPA generally intends to exercise its enforcement discretion to treat local governments that acquire property through escheat or eminent domain under certain circumstances (discussed in Paragraph IV.A. above) as exempt under Section 101(20)(D), Section 101(35)(A)(ii) provides an additional liability protection through an affirmative defense for these types of acquisitions, provided other requirements, including the exercise of due care, are satisfied.

Consistent with the discussion above in Paragraphs IV.A.2.b. and IV.B., the EPA generally intends to exercise its enforcement discretion regarding certain intergovernmental transfers of property. If a government entity transferring a property has fulfilled the requirements to achieve and maintain the innocent landowner defense pursuant to CERCLA §§ 101(35) and 107(b)(3), the EPA generally intends to treat the government transferee as within the scope of the innocent landowner defense, even if the transferee does not perform AAI prior to the transfer. In this scenario, the transferee must still achieve and maintain innocent landowner status pursuant to CERCLA §§ 101(35) and 107(b)(3).

For more information on qualifying for the BFPP and innocent landowner protections, please see the EPA's Common Elements Guidance.[22]

[21] There may be other circumstances that are similar to transfers between government entities where a liability protection may apply. For instance, a redevelopment authority that has achieved and maintained BFPP protection for a specific property may merge with a separate government entity to create a new redevelopment authority or community development agency. The EPA may exercise its enforcement discretion to not require the new authority to perform AAI at the property prior to the merger, if the new entity continues to meet its other BFPP obligations.
[22] Common Elements Guidance, *supra* note 10.

V. OTHER CONSIDERATIONS

Local governments that become involved in the cleanup and redevelopment of contaminated properties subject to CERCLA should be familiar with a number of additional considerations discussed below. For example, CERCLA includes liability protections that may apply to other cleanup-related activities by local governments. In addition, CERCLA includes cleanup funding resources that local governments may be eligible for. Finally, local governments may have responsibilities for ensuring the effectiveness of institutional controls during and after cleanup-related activities. These additional CERCLA considerations are discussed below.

A. CERCLA § 128(b) Enforcement Bar

The EPA recognizes that "[t]he vast majority of contaminated sites across the Nation will not be cleaned up by the Superfund program. Instead, most sites will be cleaned up under State authority."[23] Using these authorities, state response programs play a critical role in the assessment and cleanup of many of the contaminated properties typically acquired by local governments. CERCLA § 128(b) was enacted in 2002 to address the potential CERCLA liability concerns of parties that conduct cleanups of certain properties in compliance with state response programs. Section 128(b) provides a liability protection known as the "enforcement bar" to parties that are conducting or have completed a cleanup of an eligible response site[24] in compliance with a state response program, subject to certain exceptions.[25] As a result, a local government that is conducting or has completed a cleanup of an eligible response site in compliance with a state response program may be protected from certain federal enforcement actions. It is important to note that although CERCLA § 128(b) may limit the EPA's ability to take an enforcement action, it does not preclude third-party litigation. For more information about state cleanup programs, please see the Agency's State and Tribal Brownfields Response Program: State Voluntary Cleanup Programs website.[26]

B. Disposal of Municipal Solid Waste at Contaminated Properties

CERCLA § 107(p) provides a qualified exemption from CERCLA liability for certain residential, small business, and non-profit generators of municipal waste disposed at sites on CERCLA's NPL. However, this exemption does not apply to local governments that owned the site or operated at the site. For more information on the municipal solid waste exemption and the EPA's guidance on the exemption, please see the Agency's website.[27]

---

[23] *See* legislative history for the CERCLA amendments contained in the Small Business Liability Relief and Brownfields Revitalization Act (Pub. L. No. 107-118, 115 Stat. 2356). S. Rep. No. 107-2 (2001) at 15.

[24] An "eligible response site" as defined in CERCLA § 101(41), 42 U.S.C. § 9601(41), generally is a site that meets the definition of a "brownfield site" in CERCLA § 101(39), 42 U.S.C. § 9601(39), but is subject to certain additional inclusions and exclusions.

[25] For a complete description of the enforcement bar requirements and exceptions, see CERCLA § 128(b), 42 U.S.C. § 9628(b).

C. Liability Protection for Emergency Response at Contaminated Property

Local governmental entities, especially fire, health, and public safety departments, are often the first responders to emergencies and other dangerous situations at contaminated properties in their communities. So as not to interfere with these activities, CERCLA § 107(d)(2) provides that state or local governments will not be liable for "costs or damages as a result of actions taken in response to an emergency created by a release or threatened release of a hazardous substance by or from property owned by another party."

In addition, CERCLA § 123 authorizes the EPA to reimburse non-liable local governments for the costs of temporary emergency measures taken in response to releases within their jurisdiction. These temporary measures must be "necessary to prevent or mitigate injury to human health or the environment associated with the release or threatened release of any hazardous substance, pollutant, or contaminant." This reimbursement option is intended to give financial assistance to government entities that do not have a budget allocated for emergency response and cannot otherwise adequately respond to emergencies. The amount of the reimbursement may not exceed $25,000 for a single response.

D. Institutional Controls

When contamination remains on a property during or after cleanup activities, institutional controls (ICs) may be used in combination with engineered controls to ensure protection of human health and the environment. The EPA's IC guidance on "planning, implementing, maintaining, and enforcing" (PIME) describes ICs as "non-engineered instruments, such as administrative and legal controls, that help to minimize the potential for exposure to contamination and/or protect the integrity of a response action. . . . [and] are designed to work by limiting land and/or resource use or by providing information that helps modify or guide human behavior at a site."[28] The EPA typically uses ICs whenever contamination remains on-site in a manner that precludes unlimited use and unrestricted exposure at the property. ICs are often needed both before and after completion of the remedial action.

Regardless of whether a local government asserts BFPP status, a local government also may have a direct role in implementing, monitoring, ensuring compliance with, and enforcing certain ICs. For example, a local government may help to ensure IC effectiveness through its direct access to relevant public records, regulation of zoning and the issuance of building permits, or use of its legal authority to implement or enforce ICs. A local government may work proactively with developers, prospective buyers and tenants, and other parties to ensure that IC requirements are understood and properly integrated into the planning and future reuse of the property.

[28] See *A Guide to Planning, Implementing, Maintaining, and Enforcing Institutional Controls at Contaminated Sites* ("PIME Guidance") (Office of Enforcement and Compliance Assurance, December 2012) available on the Agency's website at https://semspub.epa.gov/work/HQ/175446.pdf.

If ICs are already in place on a particular property, it is important for local governments to understand the obligations that the ICs impose and to consider how those obligations might be viewed by future owners, developers, and property users. In some situations, the EPA or the state may be willing to modify existing ICs to facilitate the appropriate reuse of the property as long as the engineered controls component of the cleanup remains protective of human health and the environment and will not be compromised. For more information about IC issues, visit the EPA's collection of Superfund and Institutional Controls documents at the Agency's website.[29]

CATEGORIES OF INSTITUTIONAL CONTROLS

- Proprietary Controls (*e.g.*, easement, real covenant, statutory covenant)
- Governmental Controls (*e.g.*, zoning, building permit, land use ordinance)
- Enforcement and Permit Tools (*e.g.*, consent decree, permit, order)
- Informational Devices (*e.g.*, deed notice, government advisory, state registry)

VI. Contact Information

If you have any questions about this guidance, please contact Matthew Sander (202-564-7233 or sander.matthew@epa.gov) or Craig Boehr (202-564-5162 or boehr.craig@epa.gov) in the EPA's Office of Site Remediation Enforcement.

Disclaimer: This memorandum is intended solely for the guidance of EPA employees. It is not a rule and does not alter liabilities or limit or expand obligation under any federal, state, tribal, or local law. It is not intended to and does not create any substantive or procedural rights for any person at law or equity. The extent to which the EPA applies the memorandum will depend on the facts of each case.

PHASE I
ENVIRONMENTAL SITE ASSESSMENT

330 Building
330 North George Street
Charles Town, Jefferson County, West Virginia

1.0 EXECUTIVE SUMMARY

Potesta & Associates, Inc. (POTESTA) performed a Phase I Environmental Site Assessment (ESA) at the request of the Jefferson County Commission of property located at 330 North George Street, identified in the assessor's office for the Jefferson County Commission as Tax Parcels 6 and 12 on Tax Map 2A, Charles Town Corp District, Jefferson County, West Virginia (subject property).

SITE INFORMATION	
Site Owner	111 West Congress, LLC
Address	330 North George Street, Charles Town, West Virginia 25414
Current Use	American Public University System (vacant office space/academic center)
Historical Uses	Electrical substation, steam laundry facility, junk shop, machine shop, scrap metal facility, and auto repair facility.
Date of Site Visit	April 11, 2025
AULs/Environmental Liens	None

The purpose of the Phase I ESA is to provide the user with one of the requirements to qualify for limitations on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability. On November 1, 2006, the federal government enacted the All Appropriate Inquiry (AAI) Rule, which established United States Environmental Protection Agency (USEPA) guidance for conducting a Phase I ESA in order for the user to potentially qualify for an innocent landowner, contiguous property owner, or bona fide prospective purchaser defense.

POTESTA conducted the Phase I ESA per POTESTA's interpretation of procedures described in the American Society for Testing Materials (ASTM) Standard Number E 1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,* and portions of E 1528-14, *Standard Practice for Limited Environmental Due Diligence: Transaction Screen*. The ASTM Standard E 1527-21 is compliant with the AAI Rule.

The Phase I ESA was designed to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), historical recognized environmental conditions (HRECs), and significant data gaps at the subject property or adjoining sites that have the potential

to impact the subject property. RECs can result from hazardous substances or petroleum products that have been, or threaten to be, released at the site.

POTESTA's scope of services consisted of a records review, site visit, interview, and report preparation. The findings, opinions, and conclusions of the environmental professional presented in the report are supported by appropriate documentation.

POTESTA performed a Phase I Environmental Site Assessment within the scope and limitations of ASTM Practice E1527-21 of 330 North George Street, Charles Town, West Virginia, the subject property. Exceptions to, or deletions from, this practice are described in Section 2.6 of this report. This assessment has revealed the following RECs, CRECs, HRECs, and/or significant data gaps in connection with the subject property:

ENVIRONMENTAL CONDITIONS SUMMARY TABLE	
REC	The presence of SVOCs, PCBs, and metals in site soil above Human Health Screening Levels. RECs identified by Gannett Fleming on the People's Supply sites (east adjoining property) combined with the southwest presumed groundwater flow direction.
CREC	None
HREC	None
Significant Data Gap	The lack of groundwater analytics combined with the presence of soil contamination at the subject property. The lack of soil analytical data for Parcel 12 combined with its historical use as an electric sub-station. The lack of confirmation sampling analytical data from the area at the subject property where contaminated soil had been placed and re-excavated during construction.
de minimis conditions	None

2.0 INTRODUCTION

POTESTA performed this Phase I ESA at the request of Mr. Rodger Goodwin, Deputy County Andministrator / Director & Chief County Engineer, Jefferson County Department of Engineering, Planning & Zoning. It is POTESTA's understanding that the Jefferson County Commission (JCC) seeks to acquire the subject property.

2.1 Purpose

The Phase I ESA has been written to satisfy one of the requirements to qualify the user for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations under CERCLA and the AAI rule as defined at Title 42 United States Code (USC) 9601(35)(B).

According to the USEPA, the "All Appropriate Inquiry" process created under CERCLA establishes procedures for evaluating a property's environmental conditions and assessing the likelihood of contamination. The AAI rule has specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA. Procedures for conducting Phase I ESAs are established in ASTM Standard Numbers E 1527-21 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and E 1528-14 *Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process.* Those standards are recognized as being compliant with the AAI rule. POTESTA and JCC devised the scope of services for this study, which is limited to the specific project, location, and time-period described herein.

2.2 User Designation

According to the ASTM standard, the Phase I ESA is intended to permit the user to qualify for limitations on CERCLA liability. Users are typically the potential purchaser of a property, a potential tenant of property, an owner of property, a lender, or a property manager.

This Phase I ESA was prepared exclusively for:

Jefferson County Commission
116 East Washington Street, Suite 100
Charles Town, West Virginia 25414

This Phase I ESA may be used and relied upon, according to its intended purpose, by JCC. POTESTA does not make representations or warranties as to the accuracy or completeness of, and assumes no responsibility for, information provided or developed by others or for documenting conditions detectable with methods or techniques not specified in the scope of services. The report represents POTESTA's understanding of the site conditions as discernible from information provided by others and obtained by POTESTA using the methods specified. POTESTA assumes no responsibility for information provided or developed by others or for documenting conditions detectable with methods or techniques not specified in the scope of services. In addition, no activity, including sampling, assessment or evaluation of material or substance, may be assumed to be included in this study unless specifically considered in the scope of services and this report. If additional data concerning this site become available, POTESTA should be informed so that we may examine the information and, if necessary, modify this report accordingly. Opinions and conclusions are based upon professional expertise and experience, and resources used for appropriate inquiry. No other warranty or guarantee is implied or inferred.

2.3 Recognized Environmental Condition and Related Terms

The Phase I ESA was completed as an inquiry designed to identify RECs associated with the site. The E 1527-21 standard defines the term recognized environmental condition as "*(1) the presence of hazardous substances* or *petroleum products in, on, or at the subject property due to a release* to the *environment*; *(2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment*; *or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition* is not a *recognized environmental condition*."

Conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies can be categorized by the environmental professional as *de minimis*.

2.3.1 Historical Recognized Environmental Condition

The Phase I ESA process may develop evidence that the subject site had a confirmed historical release of hazardous substances or petroleum products that had been assessed and remediated. If the appropriate regulating authority concluded the assessment and remediation permit unrestricted use of the property without controls such as activity and use restrictions, then such releases will be classified as HRECs. If the HREC has been remediated to an unrestricted use designation, it will not be cited in the Phase I ESA conclusions as a REC.

2.3.2 Controlled Recognized Environmental Condition

With the growth of state and federal brownfield and voluntary cleanup programs, Phase I ESAs may be conducted for properties which were remediated using risk-based or similar criteria as established by the appropriate regulating authority. The soil and groundwater may contain residual concentrations of hazardous substances and/or petroleum products even after remediation; however, those residual concentrations are being controlled by use restrictions (engineering and/or institutional). In such cases, the property can be considered as having a CREC and such a finding will be listed as a REC in the conclusion section of the Phase I ESA report.

2.3.3 Business Environmental Risk

Business environmental risks (BERs), findings identified but not necessarily within the scope of the Phase I ESA, may also be included in this report. The E 1527-21 standard defines the term business environmental risk *as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations."*

2.3.4 No Further Action Condition

At the discretion of the environmental professional, a declaration by the appropriate regulatory agency that no further remedial action is required for a recognized environmental condition may be used to conclude that residual contamination at a site meets the definition of a *de minimis* condition.

2.3.5 Migration of Hazardous Substances and Petroleum Products

Hazardous substances and petroleum products released into the environment can migrate as solids and liquids through surface and subsurface soil and as vapors through subsurface soil. Releases on- or off-site, which contaminate the soil, groundwater, or soil vapor at a site, can result in a REC designation for the property. This assessment considered the potential pathways of migration from documented releases in establishing the environmental condition of the subject property.

The E 1527-21 standard states "*the presence within a building of hazardous substances such as vapors that have migrated into a building from a "release into the environment*" *(that is, from a* release *outside of the building) can result in CERCLA liability."* However, the assessment of soil vapor migration potential contained herein is not an evaluation of indoor air quality and no evaluation of indoor air quality is presented in this report.

2.4 Statement of Qualifications

POTESTA is an environmental and engineering consulting firm headquartered in Charleston, West Virginia. POTESTA has a multi-disciplinary staff of engineers and scientists providing engineering (environmental, civil, mining, and geotechnical), site assessment and remediation, permitting, surveying/GPS, and environmental consulting services. Since 1997, POTESTA has performed numerous ESAs at sites having various levels of complexity for a variety of commercial and industrial clients.

David J. Corsaro, Licensed Remediation Specialist is a Senior Scientist with POTESTA and performed the tasks associated with the Phase I ESA. Mr. Corsaro's Environmental Professional Statement, as required by §312.40(d) of 40 CFR 312, and resumes of Mr. Corsaro and Mr. Cole Davis, who performed the site reconnaissance, are attached.

2.5 Scope of Services

POTESTA's scope of services consisted of a records review, site visit, interview, and report preparation, as presented to JCC in the proposal dated March 26, 2025. The findings, opinions, and conclusions of the environmental professional presented in the report are supported by appropriate documentation.

2.6 Deviations

No deviations from the scope of service were required to complete this assessment.

2.7 Non-Scope Items, Limitations, Exceptions, and Special Conditions

The scope of services did not include an assessment for asbestos-containing materials, lead-based paint, lead in drinking water, radon, formaldehyde, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, methane gas, or high voltage power lines. Soil or water samples were not analyzed as part of the Phase I ESA.

Under the All Appropriate Inquiries rule, a prospective property owner may rely on a Phase I ESA report without having to update any information collected as part of the inquiry if:

- The All Appropriate Inquiries assessment was completed less than 180 days prior to the date of acquisition of the property; or
- The Phase I ESA report was prepared as part of a previous All Appropriate Inquiries assessment and was completed less than 180 days prior to the date of acquisition of the property.

2.8 Significant Assumptions

POTESTA assumed information regarding the subject property provided by JCC, obtained from federal and state agencies, as well as a report of regulatory programs for the site and properties within a 1-mile radius of the site performed by Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut, were consistent with actual site conditions.

3.0 SITE DESCRIPTION

This section describes the site setting, current land use of the site and adjoining properties, summarizes the title/deed history, and environmental lien search.

3.1 Site Information

The general site location is presented in **Figure 1** (figures are presented in **Appendix A**). An aerial photograph of the area of the site is presented in **Figure 2**. A portion of the tax map illustrating the site is presented as **Figure 3**. Photographs taken during the site visit are presented in **Appendix B**.

SITE INFORMATION	
Site Owner	111 West Congress, LLC
Address	330 North Goerge Street, Charles Town, West Virginia 25414
Deed Book/Page	1066 / 247
Tax Parcel	• Parcel 6 on Tax Map 2A in District 3 • Parcel 12 on Tax Map 2A in District 3
Acreage	Approximately 1.4 acres
Lat/Long (per EDR report)	39° 17’ 28.91” / 77° 51’ 41.69”
AULs/Environmental Liens	None

3.2 Site and Vicinity General Characteristics

The property is located in a long-established urban area of Charles Town, West Virginia. The subject property is situated along the west side of North George Street immediately south of the CSX right of way (ROW). Adjoining and in the vicinity of the subject property are a mix of commercial and residential structures.

The area of the subject property is the eastern United States, within the Valley and Ridge Physiographic Providence. The topography of this area is generally composed of Early Paleozoic sedimentary rocks. Limestones and shales are more susceptible to erosion and make up most of the valleys, whereas more resistant sandstones and conglomerates form the ridges.

According to mapping reviewed at https://www.mapwv.gov/flood/ (West Virginia Flood Tool Map), the site is not within identified flood hazard areas. However, the flood map states that unmapped flood hazard areas may be present. The average elevation of the site is approximately 519 feet above mean sea level (**Figure 4**). According to EDR’s groundwater tool in the Lightbox application, as well as mapping from Phase II ESAs conducted by ERC on neighboring properties (**Figure 5**) as part of a federally-funded assessment grant project, presumed groundwater flow direction in the vicinity of the subject property is in a southwesterly direction, POTESTA’s review of environmental assessment information and well data within a 1-mile radius of the subject site indicates variable groundwater flow direction and depths, which is typical of karst terranes/fractured bedrock systems. According to the West Virginia Geological and Economic Survey map titled "*West Virginia Tax Districts Containing Karst Terrain*" published on August 18, 2016, karst terrain is present in the area of the subject property (**Figure 6**).

3.3 Current Use of Property

Currently the subject property is owned by 111 West Congress, LLC and operated by American Public University System, Inc. (APUS) as vacant office space.

3.4 Current Uses of Adjoining Property

ADJOINING PROPERTIES (Relative to the larger Parcel 6)	
North	McKinney's Auto Repair and Towing, electrical sub-station
East	Vacant lot
South	CSX ROW, Asbury United Methodist Church, parking lots, and residential structures
West	APUS office building

3.5 Title/Deed Records

POTESTA reviewed title/deed information for the subject property online at the Jefferson County Courthouse's online document index (http://documents.jeffersoncountywv.org/). A summary of the title/deed history for the site is presented on a table in **Appendix C**.

The subject property, identified in Jefferson County Assessor's Office for the Jefferson County Commission as Tax Parcels 6 and 12 on Tax Map 2A, Charles Town Corporation District, Jefferson County, West Virginia, is currently owned by 111 West Congress, LLC and operated by APUS as vacant office space and parking facilities.

On June 29, 2009, 111 West Congress, LLC purchased both parcels of land from MSA, Inc (MSA). Prior to that, MSA had purchased Parcel 6 from R. Vance Golden, III, Trustee, on June 27, 2000, and Parcel 12 from Evelyne Viener on September 9, 2000. However, a Deed of Correction was recorded on October 22, 2007, from Evelyne Viener to MSA to resolve a chain-of-title issue arising from the original 2000 deed.

Parcel 6 History:
Prior to 2000, Parcel 6 was held by various individuals with recorded ownership dating back to at least 1906.

Parcel 12 History:
In 1997, the partnership of Hyman Viener & Sons, along with other individuals, conveyed Parcel 12 to Evelyne Viener. Previously, on May 19, 1942, Lee Bushong, Jr., Special Commissioner, conveyed Parcel 12 to Hyman Viener pursuant to a decree issued by the Circuit Court of Jefferson County on February 16, 1942, in a suit in chancery styled *Mary E. Weller, Administrator of C. P. Weller v. Mary E. Weller, et al.* The Commissioner conveyed the property as authorized by the court, and Hyman Viener was the purchaser at the judicial sale.

Further back, on July 8, 1921, C. P. Weller purchased Parcel 12 from the Northern Virginia Power Company. The 1921 deed references previous transactions, including bankruptcy filings and corporate name changes dating to 1902. According to that deed, Parcel 12 was operated as an electrical substation, which included an electric light powerhouse, a switch building, and an office.

POTESTA is not a title search company, and the land title summary should not be relied upon as a legal chain-of-title description.

3.6 Historical Uses

According to Sanborn maps, as well as other historical sources, the subject property has operated as an electrical sub-station, steam laundry facility, junk shop, machine shop, scrap metal facility, and auto repair facility.

3.7 Environmental Liens

Following ASTM procedures, POTESTA reviewed liens and recorded engineering and institutional controls on file at the Jefferson County Recorder's Office available through their online document website (http://documents.jeffersoncountywv.org/) from January 1, 1980, to April 10, 2025. No environmental liens were identified for the subject site.

4.0 RECORDS REVIEW

Current and historical public records may contain information that can be used to identify RECs at a site. In conducting the records review, POTESTA requested and reviewed information provided by a private database firm related to listings for the subject property and neighboring properties contained in selected state and federal files. POTESTA also contacted federal and state environmental agencies directly requesting access to information that may be contained in their files associated with the site, and adjacent properties when appropriate, citing the Freedom of Information Act (FOIA). The results of the records review are presented in this section.

4.1 Historical Records

POTESTA reviewed various historical records, such as topographic maps, aerial photographs, and city directory reports, in establishing the historical uses of the subject property and adjoining properties. The goal of a historical review is to establish whether past activities at the subject property or adjoining properties could have resulted in a recognized environmental condition at the subject property.

4.1.1 Topographic Maps

POTESTA reviewed USGS topographic maps illustrating the subject property dated 1884, 1891, 1893, 1914, 1916, 1943/1944, 1944, 1953, 1955, 1971, 1978, 1984, 1988, 1997, 2014, 2016, and 2019 for the area of the site located on the Harpers Ferry (30-minute), Martinsburg (15-minute), Charles Town (7.5-minute), and W. Middleway (7.5-minute) Quadrangles. The summary below outlines POTESTA's observations from this review.

1884/1891/1893
The City of Charles Town is depicted south of the subject property. There are two railways depicted on these maps, one running north to south (presumed to be the Shenandoah Valley Railway) and the other running east to west (B&O Railroad). No developments or structures are depicted on the subject property.

1914/1916
Several small structures are depicted on the subject property. Development of the City of Charles Town continues, and the City of Ranson is pictured north of the City of Charles Town.

1943 and 1944/1944/1953
Additional structures are depicted on the subject property. "Transformers" are pictured west of the subject property. Additional structures are pictured in the vicinity of the subject property. The development of the City of Charles Town and the City of Ranson continues.

1955/1971/1978
Due to heavy urban development, small structures are no longer illustrated. Two large structures and a church are pictured on the west adjoining properties. The courthouse, City Hall, and post office are depicted south of the subject property. Several medium structures are pictured east of the subject property.

1984/1988
An additional large structure is pictured on the west adjoining property.

1997
One of the structures previously pictured on the west adjoining property is no longer present.

2014/2016/2019
As a result of changes in USGS formatting, maps from 2014 and later no longer illustrate individual site structures or improvements. The roads depicted in these maps appear as they are today.

Copies of the topographic maps are presented in **Appendix D**.

4.1.2 Aerial Photographs

POTESTA reviewed aerial photographs provided by EDR dated 1959, 1974, 1980, 1988, 1997, 1999, 2000, 2016, and 2020. The summary below outlines POTESTA's observations from this review. Please note that due to the size of the subject property and resolution of the images, it was difficult to clearly identify specific site features in most photographs, with the exception of the 2016 and 2020 images.

1959/1974
One medium structure and several small structures are pictured in these photographs. Multiple large industrial structures are pictured on the west adjoining property.

1980
Additional industrial structures have been built on the west adjoining property.

1988
A large structure has been built northwest of the subject property.

1997/1999/2000
The medium structure that was previously pictured on the subject property is no longer present. Several structures on the west adjoining property have been removed, and parking areas have been developed in the footprint of some of those structures.

2016/2020
The subject property has been redeveloped, and the current building is pictured. Solar panels are pictured on the west adjoining property.

Copies of the aerial photographs are presented in **Appendix E**.

4.1.3 Fire Insurance Maps

POTESTA requested a search of available Sanborn Company fire insurance maps through EDR. Sanborn maps were first published in 1867 to help insurance underwriters understand the potential fire risk of urban structures. During the time the maps were maintained, they were published periodically as new data were recorded. The Sanborn maps can provide information concerning past owners and uses of a property.

POTESTA reviewed Sanborn maps provided by EDR dated 1885, 1892, 1897, 1902, 1907, 1913, 1922, 1932, 1940, and 1952. The summary below outlines POTESTA's observations from this review.

1885
The subject property appears to be vacant or unmapped. A small structure labeled Roselle Manufacturing Company – described as hard wood working, is pictured on the west adjoining property to Parcel 12. There appears to be a cistern and a well associated with this structure. The property north of the subject property appears to be unmapped. There is a church, and a school depicted southwest of the subject property. Valley Fertilizer Company and Lewis B. Starry Coach Manufactory are pictured east of the subject property. Residential dwellings are present in the vicinity of the subject property.

1892
The structure previously labeled as Roselle Manufacturing Company is now labeled as T.P. & W.F. Lippipp[sic] (corrected to T.P. & W.F. Lippitt on the 1897 map). North of the subject property, A.D. Goetz – described as a saddlery manufacturer is pictured. There is a structure at the A.D. Goetz facility labeled as "oil house." A structure labeled as photo gally is depicted east of the subject property.

1897
On the southern portion of the subject property, a shed is pictured, no other development is pictured on the subject property. Residential, industrial, and commercial structures are depicted in the vicinity of the subject property. The industrial and commercial structures are labeled as various wood working, feed and grain, warehousing, saddlery, and retail facilities.

1902
A structure labeled as "Electric Light Plant" is depicted on the southern portion of the subject property. Due to the resolution of the map, it is difficult to read the text associated with this structure. The structure that was previously labeled "T.P. & W.F. Lippitt" is now labeled as "old and vacant." Additionally, the well and cistern associated with this property are no longer depicted.

1907
The structure on the southern portion of the subject property is labeled as Charles Town Light & Power and described as an electrical sub-station. Transformers presumed to be associated with the sub-station are depicted on the southern portion of the subject property. Two structures are depicted on the northern portion of the subject property – one is labeled as "Ice" and the other appears to be under construction. The structure previously labeled old and vacant west of the subject property appears to have been replaced or modified, and the structure depicted at that location is now labeled C.F. Wall Company and described as baled hay and straw, flour, feed, wool, etc.

1913
Three structures are depicted on the northern portion of the subject property, one is unlabeled, one is labeled as storage, and the other is labeled as a steam laundry facility. A structure labeled as "Storage of wool" is depicted south of the subject property.

1922
The Charles Town Light & Power structure is now labeled as C.P. Weller Machine Works. The structure that was located on the northern portion of the subject property and was labeled as a steam laundry facility has been removed. Several structures are present on the northern portion of the subject property and include two residential dwellings, sheds, and one structure labeled as a "Junk Shop."

1932/1940/1952
Several structures are pictured on the northern portion of the subject property. Those structures include two residential dwellings, sheds, an auto repair facility with two gasoline tanks, junk shop, and a scrap iron storage area. A filling station with two gasoline tanks is pictured on the north adjoining property. A gasoline tank is also pictured north of the subject property in the intersection of 2nd Avenue and North George Street.

Copies of the Sanborn maps are presented in **Appendix F**.

4.1.4 City Directory

POTESTA reviewed City Directory reports for North Lawrence Street provided by EDR dated 1965, 1969, 1971, 1976, 1981, 1986, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020. The table below outlines industrial and/or commercial occupants on North Lawrence Street in the vicinity of the subject property. EDR did not provide City Directory Reports for North George Street.

City Directory Review		
1965	300 N. Lawrence Street	Atlantic Oil Corp
1971	End of N. Lawrence Street	Dixie-Narco, Inc.
1976	209 N. Lawrence Street	Page Jackson Kindergarten
	214 N. Lawrence Street	Star Lodge No. 1 F & A M
	300 N. Lawrence Street	Wright Denny Cafeteria Center
	409 N. Lawrence Street	Saint Philips Episcopal Church
1981	103 N. Lawrence Street	J C Penny Company
	End of N. Lawrence Street	Dixie-Narco, Inc.
1986	103 N. Lawrence Street	J C Penny Company
	End of N. Lawrence Street	Dixie-Narco, Inc.
1995	110 N. Lawrence Street	Morning Sunday Journal
2000	334 N. Lawrence Street	Boys & Girls Club of Jefferson County
2005	314 N. Lawrence Street	Penbac Quilting
2010	110 N. Lawrence Street	Shenandoah Women's Center Counsel
	200 N. Lawrence Street	Opportunity Learning Center
		West Virginia Youth Advocate Program
2014	110 N. Lawrence Street	Shenandoah Women's Center
	334 N. Lawrence Street	Boys & Girls Clubs of America
2017	334 N. Lawrence Street	Boys & Girls Clubs of America
2020	110 N. Lawrence Street	Shenandoah Women's Center
	334 N. Lawrence Street	Boys & Girls Clubs of America
	393 N. Lawrence Street	Electric Charging Station

A copy of the city directory report is presented in **Appendix G**.

4.2 Freedom of Information Act Requests

Citing the FOIA, POTESTA contacted the West Virginia Department of Environmental Protection (WVDEP) via email. POTESTA received responses to the FOIA request from the following offices:

- Division of Air Quality (DAQ) – No files available
- DAQ – Asbestos – No files available

- Division of Water and Waste Management (DWWM) - Environmental Enforcement (EE) – No files available
- DWWM - Clean Water State Revolving Fund – No files available
- DWWM, EE - Tanks Unit – No files available
- DWWM - Hazardous Waste Section - Files available
- Office of Environmental Remediation (OER) – No files available

Copies of the FOIA requests and responses are presented in **Appendix H**.

POTESTA reviewed the USEPA's public FOIA website (https://geopub.epa.gov/myem/envmap/myenv.html). No facilities were listed in the USEPA results other than those previously identified through WVDEP or other source(s).

A copy of the USEPA FOIA records map is presented in **Appendix H**.

4.3 Regulatory Agency Database Review

POTESTA contacted EDR for a search of environmental records maintained by the federal and state governments according to the requirements of ASTM *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, E 1527-21. A complete list of the data sources reviewed can be found in the EDR report.

The EDR report lists records identified for the subject property and properties up to a 1-mile radius of the site. Facilities identified in the environmental database search are discussed in the following sections. A copy of the EDR report is presented in **Appendix I**.

4.3.1 Facilities Listed Within Database Search Radius

Eighty-Six entries were listed in the EDR database radius report for environmental records maintained for properties within the search radius of the subject property. The number of such environmental records in an urban area is not uncommon and is not an indication as to whether a recognized environmental condition is present at a site or not. POTESTA reviewed the summaries provided in the EDR report to establish which, if any, required additional evaluation for potential RECs at the subject property.

The following listings were selected for discussion based on the available information:

Map IDs A1/A2/A3/A4/A5/A6/A7/A8/A9 (subject property) – American Public University System/The Gateway Building/APUS Academic Center/Veiner: EDR lists this facility as having records in the Manifest, Resource Conservation and Recovery Act (RCRA), Enforcement & Compliance History Information (ECHO), Facility Index System (FINDS), National Pollutant Discharge Elimination System (NPDES), and Brownfields databases. These listings are associated with the subject property and discussed in **Section 4.4**.

Map IDs A10/A11/A12 – McKinney's Auto Repair: EDR indicates that this facility has files available in the EDR Historical Auto and underground storage tank (UST) databases. POTESTA reviewed WVDEP files online through their Application Xtender Portal associated with the facility ID 1902024. WVDEP files indicate that five USTs were removed from the ground, and confirmation sample results in the file indicate that there was no contamination associated with the tanks.

Map ID B13 - Earl Wean Sr: EDR lists this facility as a Historic Auto facility in 1971 and 1972. No other information was available.

Map IDs C14/C23 – Kidde Fenwal Inc/Kidde Fire Fighting (west adjoining property): EDR lists this facility as having records available in the UST, Integrated Compliance Information System (ICIS), FINDS, ECHO, Manifest, RCRA, and PFAS ECHO databases. POTESTA reviewed WVDEP files online through their Application Xtender Portal associated with the facility IDs 1902001 and WV0000026153. According to WVDEP files, two USTs were removed from the ground in December 1990. The file states that a site assessment was performed, and no evidence of contamination was evident. WVDEP Hazardous Waste files indicate that this facility received violations for materials handling practices. However, during the site closure inspection, no violations or unsatisfactory conditions were observed.

POTESTA reviewed a Phase I ESA and a Limited Phase II Subsurface Investigation Report for this facility provided by JCC. The soil sampling results contained within the Limited Phase II Report indicate that concentrations of metals and organic hazardous substances concentrations in the site's soil exceeded human health screening levels.

This facility is also discussed in Map IDs 19 and 48.

Map IDs B15/B16/B17/B18 – Hills Chevron: EDR lists this facility as a RCRA NONGEN with no violations. EDR also lists this facility as having files available in the UST and LUST databases. POTESTA reviewed WVDEP files online through their Application Xtender portal associated with the facility ID 1901973. WVDEP files indicate the two LUST IDs were identified at this property. The first LUST was identified January 1989, and cleanup was completed March 1990. The second LUST was first identified November 1995, and cleanup was completed January 1996. According to EDR there have been ten USTs at this facility. Nine of those USTs have been closed, and one remains in service. Based on the distance from the subject property and the area's presumed groundwater flow direction, this site does not represent a REC to the subject property.

Map ID 19 – Dixie-Narco Inc (west adjoining property): EDR lists this facility as having files in the UST and RCRA databases. EDR list that this facility had two USTs which were removed from the ground in 1988. POTESTA reviewed files available online through WVDEP's Application Xtender Portal regarding the removal of the USTs. There was no indication of whether contamination was present at the time of the removal, and POTESTA did not identify site assessment or confirmation sample results in the WVDEP file associated with this tank closure. This facility is also discussed in Map IDs C14, C23, and 48.

Map ID B20 – Hills Gulf: EDR lists this facility as a Historical Auto facility from 1975 until 1992. This is presumed to be the same facility as Hills Chevron discussed above.

Map ID E24E29/E30/E31/E32 – People's Supply Showroom/Granary Property/ Masonry Garage and Warehouse: EDR lists this facility as having records in the Brownfields and FINDs databases. Online US Brownfields files indicate that Phase I ESAs were performed on these properties, but no other files were available. JCC provided POTESTA with two Phase I ESAs issued by Gannett Fleming (Fleming) for this property (one for the eastern portion of the property and one for the western portion of the property), and mapping indicating that Phase II ESAs had been performed but no Phase II ESAs were provided. Fleming identified several RECs at this facility including the discovery of two unregistered USTs, observed staining associated with spilled materials, observed improper materials storage and handling, and historical tanks located on the property which have incomplete documentation of their removal. A drawing presumed to be from a Phase II ESA of this property, issued by ERC, indicates that groundwater flow direction is southwest toward Parcel 12 (**Figure 5**).

Map IDs E27/E28 – Creamer's Automotive: EDR lists this facility as a RCRA-Very Small Quantity Generator (VSQG) with no reported violations. EDR also lists this facility as having files available in the US Brownfields, FINDS, and ECHO databases. Online US Brownfields files indicate that a Phase I ESA was performed on this property and completed September 30, 2004. No other information was available.

Map ID G37 - AMS, Inc: EDR lists this facility as having files available in the US Brownfields database. Online Brownfields files indicate that this facility was formerly used as a truck garage and repair facility and a Phase I ESA was completed for this property on September 30, 2004. No other information was available.

Map IDs F40/F41/F42/F43 – RM Roach & Sons, Inc/Ranson Rocs 615: EDR lists this facility as having files in the RCRA, ECHO, UST, LUST, and historical auto facility databases. POTESTA reviewed WVDEP Hazardous Waste files online through their Application Xtender Portal associated with the facility ID WVR000516500, and no violations were reported associated with waste handling practices. POTESTA reviewed WVDEP UST files associated with the facilities UST ID 1902002. Three leaks have been reported for this facility; the Leak IDs for this facility are 96-151, 16-041, and 2025-020. According to WVDEP files, those three leaks have been remediated; and WVDEP has designated them as "No Further Action" status.

Map ID H46 – Whitmore Lumber: EDR lists this facility as having files available in the US Brownfields database. No other information was available. It is assumed that this listing was related to Brownfields community assessment activities, during which Phase I ESAs and sampling activities were performed on sites in the area.

Map ID H47 – Former CSX Transportation Property: EDR lists this facility as having files available in the US Brownfields database. Online Brownfields files indicate that a Phase I ESA was completed for this property on September 30, 2004. No other information was available.

Map ID 48 – Former Maytag Facility (west adjoining property): EDR lists this facility as having files available in the US Brownfields and FINDS databases. Online US Brownfields files indicate that this facility received funding for a Phase I ESA that was completed on September 30, 2004. No other information was available for this facility.

This facility is also discussed in Map IDs C14, 19, and C23.

Map ID J51 – Valley Chemical and Fertilizer: EDR lists this facility as having files available in the Superfund Enterprise Management System (SEMS) Archive database. EDR files indicate that a task labeled as "other cleanup" began at this facility on October 5, 2003, and was completed on September 18, 2017. According to the WVDEP – OER "Public Record of Voluntary Remediation Program Sites" listing, this site was impacted by herbicides and pesticides, a land use covenant has been placed on the property, and the site received a Certificate of Completion on October 11, 2005.

Map IDs L60/L61 – Charles Town Public Works Facility: EDR lists this facility as having files available in the US Brownfields database. Online Brownfields files indicate that this site has the following contaminants affecting groundwater, soil, and surface water: metals, PAHs, PCBs, petroleum products, and volatile organic compounds. Online files indicate that institutional controls restricting residential use of the property will be required but have not been administered. Based on the distance and presumed direction of groundwater flow, this facility does not represent a REC at the subject property.

Map IDs K62/K63/K64 – Liberty Get N GO/West End Gulf: EDR lists this facility as having files available in the aboveground storage tank (AST), UST, and LUST databases. POTESTA reviewed WVDEP files online through their Application Xtender Portal associated with the facility Site ID 1901977. According to WVDEP files, cleanup of the LUST was initiated May 31, 1990, and cleanup was completed April 2, 1993. According to WVDEP files, the leak was remediated; and WVDEP has designated it as "No Further Action" status. Based on the distance and presumed direction of groundwater flow, this facility does not represent a REC at the subject property.

Map IDs 67/L58 – City of Charles Town Maintenance Facility: EDR lists this facility as having files available in the LUST, UST, and Brownfields databases. POTESTA reviewed WVDEP files online through their Application Xtender Portal associated with the facility ID 1910461. WVDEP files indicate that four USTs were removed from the ground at this facility in August 2007, and during the tank removal a LUST was identified. WVDEP files indicate that cleanup was completed January 4, 2008, and no further action is required at the site. EDR indicates that a Phase II ESA was performed under a Brownfields grant in July 2018, but no other information was available.

Map IDs M68/M69 – SOC Gas Station: EDR lists this facility as having files available in the LUST and UST databases. POTESTA reviewed WVDEP files available online through their Application Xtender Portal associated with the sites facility ID 1902006. WVDEP files indicate that a release was confirmed at this property December 15, 1992, and cleanup was completed April 5, 1994.

Map ID 70 - Charles Town Dixie-Narco (Evitt's Run Park): EDR files list that this property has files available in the Brownfield database. EDR files indicate that this property was formally a parking lot for Dixie-Narco, and a Phase I ESA was completed on the property. No other information was available.

Map ID 71/O74/O75 - Charles Town Coal Tar Site/Supertane MGP Site/Vacant Residence: EDR lists this facility as having files available in the SEMS, Potentially Responsible Party (PRP), US Brownfields, FINDS, Institutional Control, and Voluntary Cleanup Program (VCP) databases. According to online EPA records this facility was operated as a Manufactured Gas Plant (MGP) from the late 1800s until the mid-1950s. Contamination of the 5.31-acre site is limited to approximately 1 to 1.5 acres. Waste material from the MGP operation impacted the site. EPA files indicate that soil, groundwater, and surface waters were impacted by PAHs and VOCs. The contamination was addressed under an EPA Consent Order in the 1990s following discovery in the late 1980s. Although the site was cleaned up under EPA oversight, the contamination had not been thoroughly cleaned up and was again addressed with EPA funding. Institutional controls in the form of a geosynthetic membrane used to cap the affected area and a storm water drainage infrastructure put in place to direct storm water runoff to an adjacent rain garden and low-lying area. The membrane encapsulated impacted soils and extended across the impacted area to the western bank of Evitts Run Creek. The cap was covered with clean fill. A land use covenant was placed on the site restricting penetration of the geosynthetic cap and extraction of groundwater from the site. Based on the distance and presumed direction of groundwater flow, this facility does not represent a REC at the subject property.

Map IDs N72/N73 – 7-Eleven #10673: EDR lists this facility as having files available in the LUST and UST databases. POTESTA reviewed WVDEP files associated with the facility ID 1902008. WVDEP files indicate that a release was confirmed at this facility on April 12, 2000, and cleanup was completed September 23, 2019. No further action is required.

Map ID 76 – Dixie Narco (Eagle Avenue): EDR lists this facility as having files available in the US Brownfields database. Online Brownfields files state that this facility was formerly used as a parking lot and AST location. Brownfields files indicate that a Phase I ESA and a Phase II ESA were performed on this property and was completed January 31, 2006. No other information was available.

Map IDs P77/P78 – Circle Service Station: EDR files indicate that this facility has files available in the LUST ad UST databases. POTESTA reviewed WVDEP files associated with the facility ID 1902015. WVDEP files indicate that a release was confirmed at this facility on September 7, 1993, and cleanup was completed November 13, 2000. No further action is required.

Map IDs Q79/Q80/Q81/82 - Kidde Fire Fighting/Powhatan Place Foundry (N. Mildred Street): EDR lists this facility as having files available in the Institutional Controls, VCP, and US Brownfields databases. According to EDR files, this facility is the location of the former Kidde Fire Fighting Brass & Aluminum Foundry. EDR states that asbestos, metals, PAHs, VOCs, and petroleum products impacted the soil at this site. According to the WVDEP – OER "Public Record

of Voluntary Remediation Program Sites" listing a land use covenant has been placed on the property. WVDEP-OER records indicate that the Main Site received a Certificate of Completion on December 14, 2009, "Parcel A" received a Certificate of Completion on February 9, 2012, and "Parcel B" received a Certificate of Completion on August 27, 2012. Based on the distance and presumed direction of groundwater flow, this facility does not represent a REC at the subject property.

Map IDs R84/R85 – 786 Townmart/7-Eleven Store 1698: EDR files indicate that this facility has files available in the LUST and UST databases. POTESTA reviewed WVDEP files associated with the facility ID 1902010. WVDEP files indicate that a release was confirmed at this facility on April 26, 1995, and cleanup was completed October 10, 1995. No further action is required.

Map IDs R85/R86 – Bobby's Used Cars Abandoned Tanks: EDR files indicate that this facility has files available in the LUST and UST databases. POTESTA reviewed WVDEP files associated with the facility ID 1910300. WVDEP files indicate that a release was confirmed at this facility on July 31, 2003, and cleanup was completed May 16, 2022. No further action is required.

POTESTA reviewed the remaining records in the EDR *Radius Report* based on the criteria outlined in ASTM 1527-21 *Table 2: Types of Government Records to be Reviewed*. POTESTA reviewed those records and did not identify sources of potential recognized environmental conditions that could impact the subject property based on the nature of the releases, cleanup dates provided, and distance and direction from the subject property.

4.3.2 Orphan Sites

Included with the EDR report is a list of sites that may be located within a 1-mile radius of the subject site, but due to inadequate address information, were not mapped by EDR. POTESTA reviewed the list of facilities. POTESTA did not identify evidence that the facilities listed in the "orphan summary" pose environmental concerns to the subject property.

4.4 Previously Conducted ESAs

Previously, Fleming issued a Phase I ESA Report dated August 31, 2004, which included the subject property (Parcels 6 and 12) as well as Parcels 2, 3, 5, and 7. Please note that since the issuance of this report, Parcel 6 as it is deeded today includes what was previously referred to as Parcels 5 and 7. In the 2004 Phase I ESA, Fleming identified the following RECs that appear to be associated with current Parcels 6 and 12:

- Potential impact to soil and/or groundwater beneath Parcel 6 from petroleum hydrocarbons and metals associated with machinery storage and/or other activities at the junk shop, the auto repair facility and its associated two gasoline storage tanks, and from scrap iron storage.

- Potential impact to soil and/or groundwater beneath Parcel 12 from petroleum hydrocarbons and polychlorinated biphenyls (PCBs) associated with the former electric plant dynamos and/or transformers.

ERC issued a Phase II Report dated March 10, 2006, which included a portion of the subject property (Parcel 6) as well as Parcels 2, 5, and 7. Please note that since the issuance of this report, Parcel 6 as it is deeded today includes what was previously referred to as Parcels 5 and 7. ERC developed a Sampling and Analysis Plan based upon the findings of the Phase I ESA issued in 2004. ERC advanced 10 soil borings on the site designated as GP-1 through GP-10 and collected soil samples from each boring. Those soil samples were analyzed for: target analyte (TAL) metals; total petroleum hydrocarbons (TPH) – diesel range organics (DRO) and gasoline range organics (GRO); volatile organic compounds (VOCs); semi-volatile organic compounds (SVOCs); and polychlorinated biphenyls (PCBs). Groundwater samples were not collected due to insufficient groundwater volume. Soil boring locations from this report are presented in **Figure 7**. Please note that soil borings were not advanced on Parcel 12, the location of the former electrical substation identified on historical Sanborn Maps.

Analytical results from the samples collected during the Phase II ESA indicate that metals, SVOCs, and PCBs were detected in site soil at concentrations exceeding Human Health Screening Levels.

EDR lists this facility as having records in the Manifest, RCRA, ECHO, FINDS, NPDES, and Brownfields databases. POTESTA revied documents associated with the Facility's ID (WVR000523878) on WVDEPs Application Xtender Portal. The subject property received a Notice of Violation (NOV) dated December 28, 2010. The NOV states the reason for the issuance of the NOV to be "The Generator's contractors failed to conduct hazardous waste determinations for all of its solid waste streams." The Incident Report associated with the NOV states that soil generated by the removal of several stone and cement cisterns was spread across the site during construction, specifically the area to be developed as the parking lot. Per WVDEP's request, the soil was excavated again and sampled prior to disposal. The Incident Report states that soil "tests came back showing there was some contamination from gasoline and gasoline related constituents" [sic]. The Incident Report does not mention if confirmation samples were collected for the area where the contaminated soil was placed once it was re-excavated. Additionally, the narrative in the Incident Report states that soil was shipped to a disposal facility where the soil was tested and found to contain lead concentrations exceeding hazardous waste thresholds. That soil was then regulated and disposed at a permitted facility as hazardous waste.

Additionally, POTESTA reviewed the remaining listings in the EDR report for the subject property and did not identify other environmental conditions at the subject property that were not already identified by other sources.

5.0 SITE VISIT

The site visit is another tool to obtain information indicating the likelihood of RECs in connection with the property and consisted of observations made by a qualified professional during a "walk over" of the site. Conditions affecting the character of the property may exist that are not readily apparent through completion of a site walk over. It is possible that indications of RECs were not evident during the site visit due to limiting conditions including, but not limited to, asphalt, concrete, heavy vegetations, parked vehicles, and/or limited accessibility. Photographs of the site taken during site visit are included as **Appendix B**. An aerial photograph of site features is included as **Figure 2, Appendix A.**

SITE VISIT	
Visit Date	April 11, 2025
Field Personnel	Cole Davis
Weather	Cloudy, 44° F
Occupant/Current Use of Site	Vacant Office Building
Structures Present (Yes/No)	One four-story office building/academic center
Utilities	Electric, sanitary sewer, water, wired communications
Owner Rep/Guide	Site maintenance technician and JCC representative
Inaccessible Areas	None observed

EXTERIOR FEATURES	
Asphalt	Parking lot
Concrete	Sidewalk
Gravel	None observed
Landscaping	Landscaping "island" and property boundaries
Undeveloped Areas	None observed
Woodland	None observed
Stressed Vegetation	None observed
Stains	None observed
Surface Water, Pits, Ponds	None observed

ABOVEGROUND STORAGE	
ASTs	None observed
Drums	None observed
Cabinets	None observed
Parts Washers	None observed

ABOVEGROUND STORAGE	
Equipment Containing Oils	Fire pump diesel generator with an attached fuel tank along the north property line, and an electrical slab mounted transformer located at the southwest building corner
Equipment Containing Hazardous Materials	None observed

UNDERGROUND STORAGE	
USTs	None observed
Sumps, Pits, Grease Traps	None observed
Oil/Water Separator	None observed
Pipelines	None observed
Septic Tanks	None observed
Drop Inlets	One observed along the southern property line
Equipment Containing Oils	None observed
Equipment Containing Hazardous Materials	None observed

WASTES	
Hazardous	Not observed
Spills, Stains, Releases	Not observed
Solid	Litter observed outside of the parking lot wall adjacent to the site's stormwater discharge point. The material appears to be remnants of an encampment (e.g., clothing, shoes, camping equipment, etc.). Please note that this material has the potential to contain biological hazards such as human waste, needles, drug paraphernalia, etc.

6.0 INTERVIEWS

Interviews of persons knowledgeable of current and past uses of a property can be used to establish whether a recognized environmental condition is present at a site.

6.1 User Questionnaire

POTESTA provided JCC with a User Questionnaire, based on the sample presented in Appendix x3 of ASTM 1527-21.

Mrs. Edwina Benites, County Administrator, completed the User Questionnaire. No RECs were identified based on the responses provided in the User Questionnaire that were not otherwise identified by other sources.

A copy of the User Questionnaire is presented in **Appendix J**.

6.2 Transaction Screen Questionnaire

POTESTA provided JCC with a Transaction Screen Questionnaire (TSQ), based on the sample presented in Section 6 of ASTM 1528-14. POTESTA asked JCC to provide the owner/occupant of the site with the TSQ. In an email dated April 8, 2025, Ms. Edwina Benites of the JCC stated that JCC provided the property owners with the TSQ, and the property owners refused to complete the questionnaire.

POTESTA completed a TSQ following the site visit. No RECs were identified based on the responses provided in the TSQ that weren't otherwise identified by other sources.

A copy of the TSQ is presented in **Appendix J**.

6.3 Property Devaluation

As per requirements of the AAI rule, the relationship of the purchase price to the fair market value of the property must be assessed. According to JCC, the value of the property has not been affected by environmental conditions at the site.

7.0 EVALUATION

Based on the material evaluated in this Phase I ESA, POTESTA presents the following findings, opinions, and conclusions as to whether a REC, CREC, or significant data gap has been identified associated with the subject project.

7.1 Findings

1. Currently the subject property Is owned by 111 West Congress, LLC and operated by American Public University System as office space, currently vacant. Historically, the subject property has operated as an electrical sub-station, steam laundry facility, junk shop, machine shop, scrap metal facility, and auto repair facility.

2. Environmental Resources Consulting, Inc. issued a Phase II ESA report for the subject property dated March 10, 2006. The findings of this report identified SVOCs, PCBs, and metals in site soil above WVDEP *de minimis* benchmarks.

3. According to Environmental Resources Consulting, Inc, during the Phase II ESA, groundwater could not be collected at the subject site for analysis due to the geology at the site.

4. Parcel 12 was historically used as an electrical sub-station. POTESTA did not identify documentation of soil sampling performed on Parcel 12.

5. WVDEP issued a Notice of Violation to American Public University System on October 12, 2010 for failure to conduct hazardous waste determinations for all solid waste streams.

6. In the Incident Report dated October 12, 2010, WVDEP states that soil contaminated by gasoline and gasoline related constitutes [sic] was spread across the subject property during construction, specifically the area to be developed as the parking lot. The report stated that the soil was excavated again and sampled prior to disposal. The Incident Report does not mention if confirmation samples were collected for the area where the contaminated soil was re-excavated.

7. The north adjoining property is operated by McKinny's Auto Repair and Towing. WVDEP files indicate that five USTs were removed from the ground, and confirmation sample results contained within the file indicate that there was no contamination associated with the tanks.

8. The west adjoining property is currently operated by American Public University System as office space. Historically the west adjoining property has been utilized by Maytag, Dixie-Narco, and Kidde Fire Fighting as an industrial manufacturing facility. POTESTA reviewed a Phase I ESA and a Limited Phase II Subsurface Investigation Report for this facility provided by JCC. The soil sampling results contained within the Limited Phase II Report indicate that concentrations of metals and organic hazardous substances concentrations in the site's soil exceeded human health screening levels.

9. The east adjoining property is currently vacant. Historically it was reportedly operated by People's Supply which sold hardware and farm machinery. JCC provided POTESTA with two Phase I ESAs issued by Gannett Fleming for this property (one for the eastern portion of the property and one for the western portion of the property) and mapping indicating that Phase II ESAs had been performed, but the Phase II ESAs were not provided. Gannett Fleming identified several RECs at this facility including the discovery of two unregistered USTs, observed staining associated with spilled materials, observed improper materials storage and handling, and historical tanks located on the property for which documentation is not sufficient to establish their current status.

10. During the site visit, litter observed outside of the parking lot wall adjacent to the site's stormwater discharge point. The material appears to be remnants of an encampment (e.g., clothing, shoes, camping equipment, etc.). Please note that this material has the potential to contain biological hazards such as human waste, needles, drug paraphernalia, etc.

11. Numerous listings were reported on the EDR database report in the vicinity of the site and are discussed in Section 4.3.1.

7.2 Opinions

1. The current use of the subject property by American University System as office space does not represent a REC at the subject property. Notable findings associated with the site's historical use are discussed in the following opinions.

2. The presence of SVOCs, PCBs, and metals in site soil above Human Health Screening Levels represent a REC at the subject property.

3. The lack of groundwater analytical data combined with the presence of soil contamination at the subject property represents a significant data gap.

4. The lack of soil analytical data for Parcel 12 combined with its historical use as an electric sub-station represents a significant data gap.

5. The Notice of Violation for "The generator's contractors failed to conduct hazardous waste determinations for all of it's solid waste streams" identifies improper waste determinations at the subject property; however, this in itself does not identify a REC at the subject property.

6. The lack of confirmation sampling documentation from the area at the subject property where soil contaminated by gasoline and gasoline constituents had been placed and re-excavated represents a significant data gap.

7. Based on the confirmation sample results contained within the WVDEP file, the northern adjoining property and the USTs removed from that property do not represent a REC at the subject property.

8. Based on the presumed direction of groundwater flow in the area, the west adjoining property does not represent a REC at the subject property.

9. Based on the RECs identified by Gannett Fleming at this property combined with the southwest presumed groundwater flow direction, the former People's Supply site represents a REC at the subject property.

10. The litter observed during the site visit does not represent a REC at the subject property. However, the user of this report should note that this represents a Business Environmental Risk at the subject property.

11. A number of these listings were considered not to represent a REC at the subject site based on the information reviewed. Those statements are found in Section 4.3.1. Listings for which that statement is not made in Section 4.3.1 are further discussed in the appropriate sections of this report.

7.3 Significant Data Gaps

Data gaps are pieces of information which, after good faith efforts by the environmental professional, remained unattainable for this report and the absence of which may have resulted in an incomplete assessment of the property. The E1527-21 Standard states that a "significant data gap" is "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition."

1. The lack of groundwater analytical data combined with the presence of soil contamination at the subject property.

2. The lack of soil analytical data for Parcel 12 combined with its historical use as an electric sub-station.

3. The lack of confirmation sampling documentation from the area at the subject property where soil contaminated by gasoline and gasoline constituents had been placed and re-excavated.

7.4 Conclusions

POTESTA has performed a Phase I Environmental Site Assessment within the scope and limitations of ASTM Practice E1527-21 of 330 North George Street, identified in the assessor's office for the Jefferson County Commission as Tax Parcels 6 and 12 on Tax Map 2A, Charles Town Corp District, Jefferson County, West Virginia, the subject property. Exceptions to, or deletions from, this practice are described in Section 2.6 of this report. This assessment has revealed the following recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, and/or significant data gaps in connection with the subject property.

ENVIRONMENTAL CONDITIONS SUMMARY TABLE	
REC	The presence of SVOCs, PCBs, and metals in site soil above Human Health Screening Levels. RECs identified by Gannett Fleming on the People's Supply sites (east adjoining property) combined with the southwest presumed groundwater flow direction.

ENVIRONMENTAL CONDITIONS SUMMARY TABLE	
CREC	None
HREC	None
Significant Data Gap	The lack of groundwater analytics combined with the presence of soil contamination at the subject property. The lack of soil analytical data for Parcel 12 combined with its historical use as an electric sub-station. The lack of confirmation sampling analytical data from the area at the subject property where contaminated soil had been placed and re-excavated during construction.
de minimis conditions	None

8.0 CLOSING

This report has been prepared to assist JCC in evaluating and planning with respect to the subject site. POTESTA and JCC devised the scope of services for this study, which is limited to the specific project, location, and time-period described herein. The report represents POTESTA's understanding of the site conditions as discernible from information provided by others and obtained by POTESTA using the methods specified. POTESTA assumes no responsibility for information provided or developed by others or for documenting conditions detectable with methods or techniques not specified in the scope of services. In addition, no activity, including sampling, assessment or evaluation of material or substance, may be assumed to be included in this study unless specifically considered in the scope of services and this report. Sketches and maps in this report are included only to aid the reader and should not be considered surveys or engineering studies. If additional data concerning this site become available, POTESTA should be informed so that we may examine the information and, if necessary, modify this report accordingly.

Respectfully Submitted,

POTESTA & ASSOCIATES, INC.

David J. Corsaro
Senior Scientist

DJC/mh

QUALIFICATIONS

ENVIRONMENTAL PROFESSIONAL STATEMENT

David J. Corsaro, Licensed Remediation Specialist. Mr. Corsaro is a Senior Scientist with POTESTA and performed the tasks associated with the Phase I ESA. Mr. Corsaro has over 20 years of relevant experience with POTESTA in environmental and waste management projects including Phase I ESAs, Phase II ESAs, characterization and remediation, health and safety, and preparation of project plans and specifications.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in ASTM Standard E 1527-21 and §312.40 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property, and have developed and performed the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1997-2000 Clearon Corporation

PROFESSIONAL REGISTRATIONS

- Licensed Remediation Specialist – West Virginia
- Certified Monitoring Well Driller – West Virginia

PROFESSIONAL CERTIFICATIONS

Hazardous Waste Operations and Emergency Response – 40-hour

AREAS OF SPECIALIZATION

Educational background in industrial health/safety and environmental science. Experienced with West Virginia Voluntary Remediation and LUST Programs, RCRA, and CERCLA/USEPA Brownfields. Project management and field experience include site assessment and remediation of commercial, industrial, and residential sites; environmental emergency response; and hazardous waste management.

PROFESSIONAL EXPERIENCE

Hazardous Waste/RCRA/Corrective Action

RCRA compliance assistance regarding waste analysis, recordkeeping, storage areas, applicable exemptions, and point of generation issues. Managed large amounts of hazardous and non-hazardous wastes as part of remediation projects.

ESAs (Phase I and II)

Numerous Phase I Environmental Site Assessments (ESAs) on various types of sites, including:

- Large land transaction totaling over 145,000 acres.
- Former industrial sites as part of a USEPA Brownfields Assessment Grant.
- Numerous active and former industrial and commercial facilities.
- Undeveloped and residential properties.

Meets the definition of environmental professional as defined in ASTM Standard E 1527-21 and §312.40 of 40 CFR 312.

Phase II/Sampling ESAs, including soil boring advancement and sampling, monitoring well installation and sampling, surface water sampling, and soil gas sampling:

- West Virginia Voluntary Remediation Program (VRP).
- West Virginia Leaking Underground Storage Tank (LUST) Program.
- Ohio Bureau of Underground Storage Tank Regulation (BUSTR).
- Resource Conservation and Recovery Act (RCRA) Corrective Action.
- Comprehensive Emergency Response, Compensation, and Liability Act (CERCLA) Site Assessment and United States Environmental Protection Agency (USEPA) Brownfields.
- Environmental emergency response (petroleum and chemical spills related to transportation incidents), typically performed under state environmental response or enforcement programs.
- Property transaction-related (*i.e.*, due diligence or baseline ESAs).

Remediation

Experienced with remediation of sites impacted by petroleum, volatile and semi-volatile organics (including chlorinated solvents), metals, dioxin, and polychlorinated biphenyls (PCBs). Experience with bioremediation (aerobic and anaerobic), excavation, slurry walls, solidification/stabilization, pump and treat, soil vapor extraction, dual phase extraction, capping, and institutional controls.

Environmental Emergency Response

Performed and/or managed environmental response, assessment, and/or remediation on over 40 transportation-related incidents in West Virginia, Kentucky, Ohio, Pennsylvania, and Virginia. These have included a response to and assessment and remediation of releases from chemical and petroleum tankers and fuel tanks, transfer and/or removal of cargo, and coordination with regulatory agencies and affected property owners.

- Gasoline tanker release of over 3,500 gallons in northern Kentucky onto private property and railroad right of way (ROW). Remediation included excavation of soil and subsurface injection of a bioremedial compound on both sides of railroad ROW.
- Formaldehyde tanker release of 4,500 gallons in western Virginia. The project included initial containment, sampling, and monitoring of groundwater contamination, soil remediation, hazardous waste characterization and disposal, US Army Corps of Engineers permitting access roads, and ambient air sampling.
- Gasoline tanker release of over 3,000 gallons to frozen stream in central Ohio. Remediation included excavation of impacted streambed areas (with United States Army Corps of Engineers approval), additional soil, and subsurface injection of a bioremedial compound.
- A trailer load of white paint spilled adjacent to an interstate highway in West Virginia. Remediation included onsite solidification and removal of free liquids.
- Acid and caustic releases require stabilization of the remaining load and on-site neutralization and removal of spilled material.
- Errant product deliveries result in spills or damage to the facility and/or inventory.
- Chemical lime spill to stream in western Virginia requiring long-term biological monitoring.

Groundwater

Groundwater sampling for numerous environmental assessment remediation projects at various sites including current and former industrial facilities, commercial and residential properties, and waste disposal facilities:

- Due diligence/property transactions
- Voluntary Remediation Program
- RCRA Corrective Action
- Leaking underground and aboveground storage tank releases
- Highway incidents

Groundwater monitoring and reporting for site permitted by RCRA and NPDES/Solid Waste:

- Solutia Inc. – Plant Site and Armour Creek Landfill
- BASF – 31st Street Landfill
- Cytec Industries – Closed RCRA Hazardous Waste Impoundments
- Monsanto – Heizer and Manilla Creek Landfills
- Pocahontas Solid Waste Authority – County Landfill

Additional Experience

Storage Tanks:

- Oversight of removal of USTs in West Virginia, Ohio, and Michigan, and management of UST components from over 30 sites in support of litigation.
- Compliance assistance and management of UST removals.

Biological Studies and Sampling:

- Performed surface water and sediment sampling and benthic invertebrate collection as part of an evaluation of the environmental impact of a coal slurry spill.
- Performed baseline water quality sampling for several projects as part of mixing zone and metals translator studies.

Industrial Health and Safety:

- Served as Health and Safety Officer for several WV VRP RCRA and Corrective Action projects.
- Developed Health and Safety Plans for sampling activities for numerous types of projects.

File Review/Environmental Audits:

- Participated in the review of more than 1,000 state CERCLIS files as an audit for the West Virginia Department of Environmental Protection file system.
- Managed compliance audit field team for clients with numerous facilities throughout West Virginia.

EMPLOYMENT HISTORY

2021-Present Potesta & Associates, Inc.

PROFESSIONAL CERTIFICATIONS

Asbestos Inspector – West Virginia

HONORS

Cum Laude

AREAS OF SPECIALIZATION

Stormwater and groundwater sampling, monitoring, and reporting, asbestos inspection and reporting, SPCC and SWPPP development and updates, site plan development; Phase I Environmental Site Assessment activities, and construction observation.

PROFESSIONAL EXPERIENCE

Phase I/II Environmental Site Assessments (ESA)

Rodger Crites – Assisted with Phase I ESA for a vacant lot that was formerly used to store building materials and construction equipment in Moorefield, West Virginia, including records searches, title/deed, and environmental liens searches, site visits for conditions and environmental settings of the properties, interviews, and completion of Phase I ESA Report.

EDF Renewables – Assisted with Phase I ESA for a solar development project of approximately 842 acres near Charles Town, West Virginia. Including records searches, title/deed, and environmental liens searches, site visits for conditions and environmental settings of the properties, interviews, and completion of Phase I ESA Report.

Civil/Site Design

Harpers Ferry Holdings, LLC – Development of red-lined site plan of an approved site plan for permitting purposes for an apartment complex at River Riders Family Adventure Resort in Jefferson County, West Virginia. The red-line changes are to relocate the proposed snow tubing hill and maintenance building. Changes included site grading, erosion, sediment controls, stormwater management systems, and sanitary sewer systems. Included the development of the Construction Storm Water Pollution Prevention Plan and Groundwater Protection Plan.

Samra Autos – Engineering design services associated with the development of two 900 SF buildings and an additional 8,000 SF building (auto garage and carpentry shop) on five parcels of land in Stephens City, Virginia.

Spelunker's Restaurant – Development of a site plan for the seating area and parking lot expansion at the existing restaurant in Front Royal, Virginia.

Sewer Lines and WWTPs

Town of Front Royal, Virginia – Master Agreement to provide technical/specialty utility engineering services related to water and wastewater projects to the Town. The project has included an upgrade of the WWTP influent pump station and the Riverton Pump Station.

Stormwater

Rubbermaid Commercial Products – Quarterly facility inspection and visual monitoring of stormwater facilities and stormwater quality at Apple Valley Distribution Center and Valley Avenue Facility in Winchester, Virginia. Included development and updates to Storm Water Pollution Prevention Plan.

Construction Observation

Carmeuse Lime & Stone – Construction observation services associated with the construction of the Kiln Feed Yield Crushing and Material Handling Upgrades Project. Included laboratory compaction tests and preparation of monthly status reports in Frederick County, Virginia.

FIGURE 6

West Virginia Tax Districts Containing Karst Terrain

"Karst terrain" means a terrain, generally underlain by limestone or dolomite, in which the topography is formed chiefly by the dissolving of rock and which may be characterized by sinkholes, sinking streams, closed depressions, subterranean drainage, and caves.

The principal karst-forming carbonate rocks in West Virginia are within the Mississippian Greenbrier Group; Devonian and Silurian Helderberg Group and Tonoloway Limestone; and Ordovician and Cambrian Black River Group, Saint Paul Group, Beekmantown Group, Conococheague Formation, Elbrook Formation, and Tomstown Dolomite. Based on recent geologic mapping in southern West Virginia, the Mississippian Avis Limestone, also known as the Little Stone Gap, can be added to this list.

This map shows the outcrop of these carbonate units and the tax districts in which the outcrops occur. It is based on publications of this agency as well as field observations by experienced Geological and Economic Survey geologists who have conducted detailed geologic mapping in the state.

The only publically-available source of cave locations in West Virginia is West Virginia Geological and Economic Survey Volume 19A by William E. Davies, titled "Caverns of West Virginia."[1] It was first published in 1949, revised and reprinted in 1958, and reprinted with supplement in 1965. The map shows locations of caves from Volume 19A observed within the carbonate outcrop area. Despite the fact that Davies' locations were somewhat generalized, they fall on the bands of carbonate outcrop.

Davies book also lists cave locations in other parts of the state, but they are for the most part isolated, very small, in some cases "shelter" caves, or formed in sandstone, and are not part of a karst terrain. Thin marine limestones occur in the coal measures, but where these units crop out in the northern part of the state, isolated caves are few in number and small in size. Similarly, an outcrop of the Greenbrier Limestone occurs in Webster County near Webster Springs, but it is very limited in areal extent and not included in the map.

Therefore, this map identifies those districts that contain outcrops of geological units exhibiting the characteristics of karst, including caves and sinkholes.

---

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	*Scale*	*Details*	*Source*
2020	1"=500'	Flight Year: 2020	USDA/NAIP
2016	1"=500'	Flight Year: 2016	USDA/NAIP
2000	1"=500'	Flight Date: March 31, 2000	USGS
1999	1"=500'	Flight Date: March 20, 1999	USGS
1997	1"=500'	Acquisition Date: January 01, 1997	USGS/DOQQ
1988	1"=500'	Acquisition Date: April 11, 1988	USGS/DOQQ
1980	1"=500'	Flight Date: March 27, 1980	USDA
1974	1"=500'	Flight Date: March 14, 1974	USGS
1959	1"=500'	Flight Date: December 04, 1959	USGS

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Potesta & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Sent: Friday, March 28, 2025 1:40 PM
To: Melissa High
Subject: Re: Freedom of Information Act Request (25-0090-001)

Hello:

This letter is to acknowledge that the West Virginia Department of Environmental Protection's (DEP) Public Information Office received your Freedom of Information Act (FOIA) Request. Your request has been sent to the appropriate office(s) within our agency and you will be notified as to when you may review/copy/receive the requested information.

Information in agency files is available for public inspection. However, some material may be exempt from disclosure under the West Virginia Freedom of Information Act, Chapter 29B.

DEP also provides an informational service to the public. Visitors to the agency's website can subscribe to both a listing of permit actions open to public comment and updates on DEP news and events. To subscribe to these email notifications, go to http://www.dep.wv.gov/insidedep/Pages/DEPMailingLists.aspx.

Please submit all FOIAs to DEPFOIA@wv.gov.

There is no charge to submit a FOIA request. If you need further assistance, please contact us at 304-926-0499.

Regards,

WVDEP-Public Information Office

Attachments: AST&UST Appx instructions for public.pdf

Based on the information provided, we have no records of AST/UST Activity at this site.

You may now use the online reports to find your property, use the facility ID and go to our new online database to find all the reports you may need.

If you already know your facility ID you may go directly to the Application Xtender database http://documents.dep.wv.gov/appxtender and follow the directions attached. To obtain facility ID or to search for a facility go to the reports page: https://apps.dep.wv.gov/tanks/public/Reports.aspx you can choose from Above Ground Storage Tanks (AST) or Underground Storage Tanks (UST), once you open the report you can search the excel spreadsheet or the PDF for the property address, county etc.

Once you find your property use the Facility ID to search the online database for all of the reports you need. I have attached the directions on how to obtain your reports. If you have any further questions please let me know.

Incident Report

Incident Name: American Public University System

Date / Time Responded To: 0900, 12 October 2010

Date / Time Occurred: 27 September 2010

Description: Illegal disposal of Hazardous Waste

Location: Charlestown, WV 25414

GPS Coordinates: 39.29176° N 77.86145°W (WGS 84 Datum)

County: Jefferson

Material Released: Lead

Responsible Party: American Public University System

Address: 330 George Street, Charles Town, WV 25414

Telephone: 304-724-3749

Investigation Summary: In 2006, plans were begun for construction of a building on a parcel of land located at 330 George St., Charles Town, WV. This building would be owned and operated by American Public University Systems (hereinafter referred to as APU). This building would contain office space for the university staff. Two site assessments were done prior to construction. The first was done in 2000 by ABC, and the second was done in March 2006 by Environmental Resources and Consulting, LLC of Elkview, WV. Both of these are on file in the Romney Field Office.

During both assessments it was determined that a portion of this site was at one point a gasoline station and a salvage yard. This parcel also contained the site of two homes that were built in the very early 1900's. These homestead sites also contained two above ground storage tanks for home heating oil. These tanks were removed and disposed of properly. The gasoline station also contained two UST's that were removed and remediated by Miller Environmental on 8 and 12 January 2010

In mid August 2010, two loads totaling approximately 21.7 tons of soil was transported to Clean Earth of Maryland by Mid Atlantic Site Development on behalf of

APU. This soil originated on the George Street site from the removal of several 4 foot by 20 foot stone and cement cisterns earlier in 2010 or late 2009. This soil was piled on site and covered for several months. During this time frame, WVDEP Inspector Michael Kanehl had been overseeing the site under the Clean Water Act. Inspector Kanehl had requested several times by phone and email, for the soil to be sampled and transported off site in the appropriate manner. In January 2010, during a routine drive by Inspector Kanehl, he noticed the dirt pile was absent. Upon inquiry, he learned the dirt had been distributed across the parcel in an area that was to be capped for a parking lot. He instructed APU Facilities Manager Mr. Joseph Sladki, to send his disposal records for the soil. During the next few weeks, it was determined that the soil was still on site, but would be dug again, and sampled prior to disposal. Tests for DRO's, GRO's and VOC's were conducted. These tests came back showing there was some contamination from gasoline and gasoline related constituents. No tests were directed for any other source of contamination. As this site is in a part of the state where orchards were abundant, as well as being known to have been a salvage yard for most of its time in the 20th century, tests should have been done for pesticides and RCRA metals.

On 19 August 2010, 21.7 tons of soil were transferred to Clean Earth of Maryland. Upon its arrival, it was placed on a separate concrete pad, and samples were taken and tested for RCRA pesticides and RCRA metals. On 15 September 2010 the results were returned from Fairway Laboratories. These results showed the presence of Lead at a level of 7.1 mg/l. At this point, Ms. Reader was bound by her permit to notify both Maryland Department of Environmental Quality and West Virginia Department of Environmental Protection that she had unpermitted substances at her facility. Mid-Atlantic Site Development was notified that the soil could not remain at the Clean Earth Maryland site, and would have to be removed to an appropriate facility. Steps were immediately taken to attain a new EPA Identification number, and move the soil from Clean Earth Maryland to Clean Earth New Jersey, a site permitted to handle hazardous waste. The soil was removed by Monday of the following week.

As an aside, I asked Ms. Nancy Reader, manager of Clean Earth Maryland, why she performed additional testing on the soil. She relayed to this inspector that if her facility received a shipment without confirmation by any of the local state environmental enforcement personnel that the soil only contained diesel, gasoline, heating oil, etc., then her facility would test for RCRA metals and pesticides, while informing the shipper that they would be billed for the additional testing.

Action Taken: Recommend APU be cited by NOV for not knowing what their waste streams contained, and improper disposal. See attached.

Photographs: None

Samples: None. The tests results done by Clean Earth are on file in the Romney office.

NOTICE OF VIOLATION

DATE INSPECTED: 12 October 2010 TIME INSPECTED: 0900

ISSUED TO: American Public University System

US EPA ID NUMBER: WVP 000004368

FACILITY MAILING ADDRESS: 330 George Street, Charles Town, WV 25414

FACILITY REPRESENTATIVE: Mr. Joseph Sladki

On the above specified date, an authorized agent of the Director of the Division of Water and Waste Management conducted an inspection of the facility described above in accordance with West Virginia Code §22. During that inspection, the following violations were noted:

1. A. (Regulation) 40 CFR Part 262.11 as referenced by 33 CSR 20-5.1

B. (Facts) The Generator's contractors failed to conduct hazardous waste ("HW") determinations for all of its solid waste streams.

In order to correct the violations cited above, the following measures are necessary:
In future take necessary steps to determine what tests are necessary to determine if any hazardous materials are contained in any wastes.

The issuance of this Notice may result in further enforcement action(s) in accordance with West Virginia Code §22. Within 14 days receipt of this Notice, submit your written response to the address listed above. Please contact the Environmental Inspector listed below if you have any questions regarding this Notice.

It should be noted that this waste stream was characterized by the receiving facility, and proper steps were taken to properly dispose of this waste at an appropriate facility on 28 September 2010.

ISSUED BY: David P. Nesbitt, Environmental Inspector

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the

United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are

5 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

ROACH R M & SONS INC	400 S FAIRFAX BLVD	N 0 - 1/8 (0.115 mi.)	F42	173

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

KIDDE FENWAL INC DBA KIDDE FIRE FIGHTING (Continued) **1000235197**

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

FINDS:
Registry ID: 110005270660

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on Brownfields properties assessed or cleaned up with grant funding, as well as information on Targeted Brownfields Assessments (TBA) performed by EPA Regions.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Waste Description: Selenium

Waste Code: D012
Waste Description: Endrin (1,2,3,4,10,10-Hexachloro-1,7-Epoxy-1,4,4a,5,6,7,8,8a-Octahydro-1,4-Endo, Endo-5,8-Dimeth-Ano-Naphthalene)

Waste Code: D024
Waste Description: M-Cresol

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

CVS PHARMACY #1428 (Continued) **1014962662**

Waste Code: P188
Waste Description: Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U188
Waste Description: Phenol

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Engineering Barriers (e.g., Slurry Walls, Sheet):	Y
Other:	Not reported
Additional Engineering Controls Information:	A geosynthetic membrane was used to cap the affected area of the site with storm water drainage infrastructure put in place to direct storm water runoff to an adjacent rain garden and low-lying area. The membrane encapsulated impacted soils and extended across the impacted area to the western bank of Evitts Run Creek. The cap was covered with clean fill.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal brownfield sites

BROWNFIELDS: Brownfields Sites Listing
Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

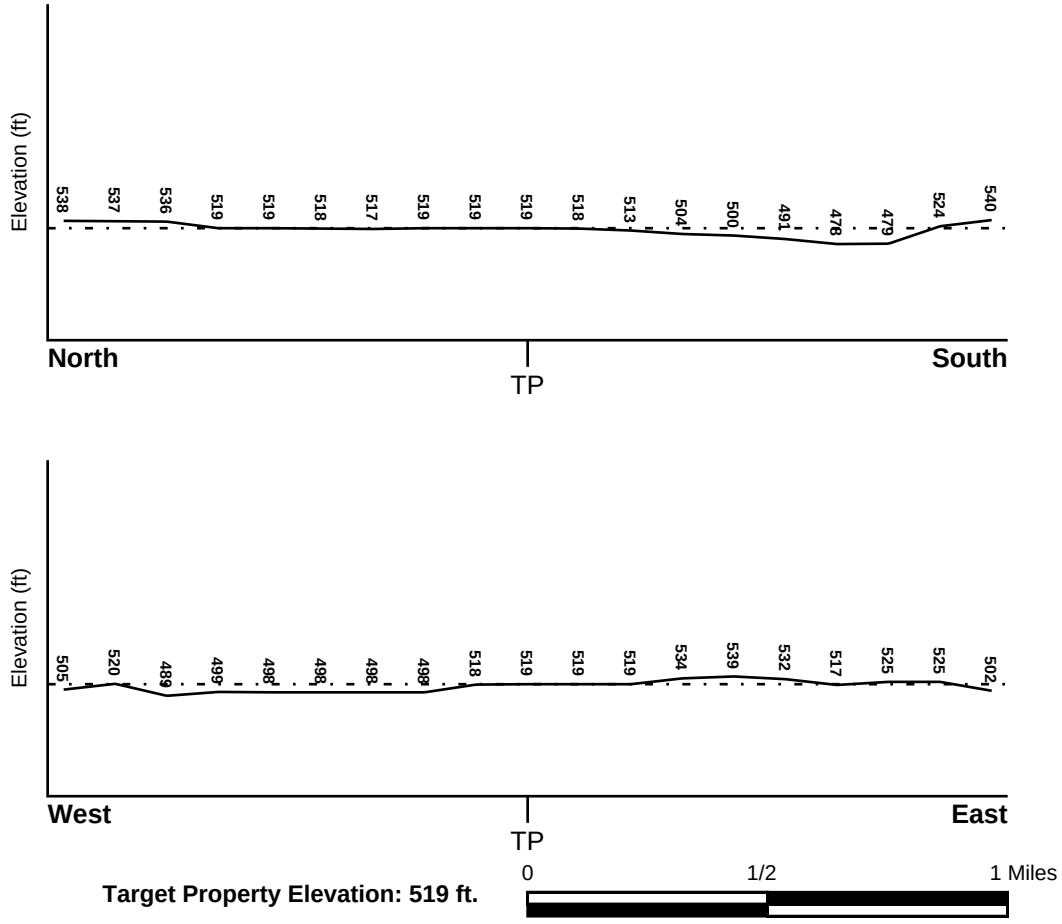
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
54037C0136E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
54037C0137E	FEMA FIRM Flood data
54037C0120E	FEMA FIRM Flood data
54037C0138E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CHARLES TOWN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Cambrian
Series:	Cambrian
Code:	C *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	HAGERSTOWN
Soil Surface Texture:	silt loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 80 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	8 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 6.00 Min: 0.60	Max: 6.50 Min: 4.50
2	8 inches	20 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 7.30 Min: 4.50
3	20 inches	72 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.10

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silty clay loam

Surficial Soil Types: silty clay loam

Shallow Soil Types: silt loam

Deeper Soil Types: channery - silt loam
stratified
loam
unweathered bedrock

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: US Fish & Wildlife Service
Telephone: 703-358-2171

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

West Virginia Water Well Information

PHASE I ENVIRONMENTAL SITE ASSESSMENT
User Questionnaire

SITE NAME: 111 West Congress, LLC Property (Tax Parcels 6 and 12 on Tax Map 2A, Charles Town Corp District)

SITE ADDRESS: 330 North George Street, Charles Town, Jefferson County, West Virginia

The ASTM E 1527-21 standard lists a series of informational questions to be presented to the User so that site specific knowledge can be evaluated by the Environmental Professional assessing the subject property for recognized environmental conditions. Please complete to the best of your knowledge.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local laws?

   ☐ Yes ☒ No Comments: we are unaware of any information beyond the documents provided

2. Are you aware of any activity and use limitations such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal state, or local laws?

   ☐ Yes ☒ No Comments: see above

3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   ☐ Yes ☒ No Comments: See above

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If not, is the lower purchase price attributable to known or suspected contamination?

   ☑ Yes ☐ No Comments:

5. Are you aware of information about the property that would be helpful in identifying conditions indicative of contaminant releases, such as: a) past use of the property; b) presence of specific chemicals (past or present); c) spills or chemical releases at the property; or d) environmental cleanups that have taken place at the property?

   ☐ Yes ☒ No Comments: See above

6. Based on your knowledge of and experience with the property, are there any obvious indicators that point to the presence or likely presence of contamination on the property?

   ☐ Yes ☐ No Comments: see above

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Facility: Tax Parcels 6 and 12 on Tax Map 2A, Charles Town Corp District (111 West Congress, LLC Property)

Address: 330 North George Street, Charles Town, Jefferson County, West Virginia 25414

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
1a. Is the *property* used for industrial use?					X		Currently the property is operated by APUS as office space.
1b. Is any *adjoining property* used for an industrial use?					X		
2a. Did you observe evidence or do you have any prior knowledge that the *property* has been used for an industrial use in the past?				X			Several businesses have operated at this site including a scrap metal facility and machine shop.
2b. Did you observe evidence or do you have any prior knowledge that any *adjoining property* has been used for an industrial use in the past?				X			The west adjoining property was previously a manufacturing facility operated by multiple entities.
3a. Is the *property* used as a gasoline station, motor repair facility, commercial/industrial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?					X		
3b. Is any *adjoining property* used as a gasoline station, motor repair facility, commercial/industrial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?				X			The north adjoining property is an auto repair and towing facility.

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
4a. Did you observe evidence or do you have any prior knowledge that the *property* has been used as a gasoline station, motor repair facility, commercial/industrial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?				X			Sanborn maps indicate that this property has operated as a metal recycling facility, machine shop, auto repair facility, filling station, steam laundry facility, and electrical substation.
4b. Did you observe evidence or do you have any prior knowledge that any *adjoining property* has been used as a gasoline station, motor repair facility, commercial/industrial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?				X			The north adjoining property is currently an auto repair and towing facility. According to Sanborn maps, the north adjoining property operated as a filling station.
5a. Are there currently any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of >5 gallons (19 L) in volume or 50 gallons (190 L) in the aggregate, stored on or used at the *property* or at the facility?					X		
5b. Did you observe evidence or do you have any prior knowledge that there have been previously any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of >5 gallons (19 L) in volume or 50 gallons (190 L) in the aggregate, stored on or used at the *property* or at the facility?						X	Based on previous operations at the site, it is likely that batteries, paints, and other chemicals were stored at the site. Transformers associated with Parcel 12's prior use as an electrical substation likely used oils containing PCBs.
6a. Are there currently any *industrial drums* [typically 55 gallons (208 Liters)] or sacks of chemicals located on the *property* or at the facility?					X		

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
6b. Did you observe evidence or do you have any prior knowledge that there have been previously any *industrial drums* [typically 55 gallons (208 Liters)] or sacks of chemicals located on the *property* or at the facility?						X	Based on previous operations at the site, it is likely that batteries, paints, and other chemicals were stored at the site. Transformers associated with Parcel 12's prior use as an electrical substation likely used oils containing PCBs.
7a. Did you observe evidence or do you have any prior knowledge that *fill dirt* has been brought onto the *property* that originated from a contaminated site?					X		
7b. Did you observe evidence or do you have any prior knowledge that *fill dirt* has been brought onto the *property* that is of an unknown origin?					X		
8a. Are there currently any *pits, ponds, or lagoons* located on the *property* in connection with waste treatment or waste disposal?					X		
8b. Did you observe evidence or do you have any prior knowledge that there have been previously, any *pits, ponds, or lagoons* located on the *property* in connection with waste treatment or waste disposal?					X		
9a. Is there currently any stained soil on the *property*?					X		
9b. Did you observe evidence or do you have any prior knowledge that there has been previously any stained soil on the *property*?					X		
10a. Are there currently any registered or unregistered storage tanks (above or underground) located on the *property*?					X		
10b. Did you observe evidence or do you have any prior knowledge that there has been previously any registered or unregistered storage tanks (above or underground) located on the *property*?				X			Two USTs and several other vessels have been removed from this site according to information reviewed in WVDEP files.

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
11a. Are there currently any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the property?					X		
11b. Did you observe evidence or do you have any prior knowledge that there has been previously any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the property?				X			Two USTs associated with the site's former operation as a filling station are documented on Sanborn maps. Presumably, these tanks would have had fill pipes and vent pipes.
12a. Is there currently evidence of leaks, spills or staining by substances, other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the *property*?					X		
12b. Did you observe evidence or do you have any prior knowledge that there has been previously any leaks, spills or staining by substances, other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the *property*?					X		
13a. If the *property* is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?					X		NA Building is serviced by city water.
13b. If the *property* is served by a private well or non-public water system, is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency?					X		NA Building is serviced by city water.

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
14. Does the owner or occupant of the *property* have any knowledge of *environmental liens* or governmental notification relating to past or recurrent violations of environmental laws with respect to the *property* or any facility located on the *property*?						X	The owner refused to complete the TSQ.
15a. Has the *owner or occupant* of the *property* been informed of the past existence of *hazardous substances* or *petroleum products* with respect to the *property* or any facility located on the *property*?						X	The owner refused to complete the TSQ.
15b. Has the *owner or occupant* of the *property* been informed of the current existence of *hazardous substances* or *petroleum products* with respect to the *property* or any facility located on the *property*?						X	The owner refused to complete the TSQ.
15c. Has the *owner or occupant* of the *property* been informed of the past existence of environmental violations with respect to the *property* or any facility located on the *property*?						X	The owner refused to complete the TSQ.
15d. Has the *owner or occupant* of the *property* been informed of the current existence of environmental violations with respect to the *property* or any facility located on the *property*?						X	The owner refused to complete the TSQ.
16. Does the *owner or occupant* of the *property* have any knowledge of any *environmental site assessment* of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?						X	The owner refused to complete the TSQ.

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

Question	Owner/Occupant			Observed during site visit			Comments
	Yes	No	Unk[1]	Yes	No	Unk[1]	
17. Does the *owner or occupant* of the *property* know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the *property* by any *owner or occupant* of the *property*?						X	The owner refused to complete the TSQ.
18a. Does the *property* discharge *waste water* (not including sanitary waste or storm water) onto or adjacent to the *property* and/or into a storm water system?					X		
18b. Does the *property* discharge *waste water* (not including sanitary waste or storm water) onto or adjacent to the *property* and/or into a sanitary sewer system?					X		
19. Did you observe evidence or do you have any prior knowledge any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the property?					X		
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of Polychlorinated Biphenyls (PCBs)?					X		There is a slab mounted transformer at this facility and at the time of the site visit, there was no indication whether or not the oils inside the transformer contain PCBs.

Unk[1] = Unknown

[Questionnaire obtained from ASTM E-1528-14]

PHASE I ENVIRONMENTAL ASSESSMENT - TRANSACTION SCREEN QUESTIONNAIRE

GOVERNMENT RECORDS/HISTORICAL SOURCES INQUIRY

(See guide, Section 10 ASTM E-1528-14)

21. Do any of the following federal, state, or tribal government record systems list the *property* or any *property* within the search distance noted below (where available):

	Approximate Minimum Search Distance, miles (kilometers)	
Federal NPL site list	1.0 (1.6)	☐ Yes ■ No
Federal Delisted NPL site list	0.5 (0.8)	☐ Yes ■ No
Federal CERCLIS list	0.5 (0.8)	■ Yes ☐ No
Federal CERCLIS NFRAP site list	0.5 (0.8)	■ Yes ☐ No
Federal RCRA CORRACTS facilities list	1.0 (1.6)	☐ Yes ■ No
Federal RCRA non-CORRACTS TSD Facilities list	0.5 (0.8)	☐ Yes ■ No
Federal RCRA generators list	property and adjoining properties	■ Yes ☐ No
Federal institutional control/engineering control registries	property only	☐ Yes ■ No
Federal ERNS list	property only	☐ Yes ■ No
State and tribal lists of hazardous waste sites identified for investigation or remediation:		
State and tribal-equivalent NPL	1.0 (1.6)	☐ Yes ■ No
State and tribal-equivalent CERCLIS	0.5 (0.8)	☐ Yes ■ No
State and tribal landfill and/or solid waste disposal site lists	0.5 (0.8)	☐ Yes ■ No
State and tribal leaking storage tank lists	0.5 (0.8)	■ Yes ☐ No
State and tribal registered storage tank lists	property and adjoining properties	■ Yes ☐ No
State and tribal institutional control engineering control registries	property only	■ Yes ☐ No
State and tribal voluntary cleanup sites	0.5 (0.8)	■ Yes ☐ No
State and tribal Brownfield sites	0.5 (0.8)	■ Yes ☐ No

22. Based upon a review of *fire insurance maps*. *local street directories*, or *aerial photographs*, all as specified in the guide (10.2.1), are any buildings or other improvements on the property or on an adjoining property identified as having been used for an industrial use or that could possibly lead to contamination of the property? ■ *Yes* ☐ *No* ☐ *Unavailable*

Result: _____

SOIL MANAGEMENT AND HEALTH AND SAFETY PLAN FOR ENVIRONMENTAL CONTAMINANTS IN SOIL

330 North George Street
Charles Town, Jefferson County,
West Virginia

QUICK GUIDE

APPLICABILITY

This document applies to activities below grade that result in direct worker contact with site soil and/or generate soil to be disposed.

SOIL MANAGEMENT

On-Site — Soil can be moved around and/or placed on site without restriction, but should be covered once placed.

Off-Site — Soil can be disposed of off-site at a permitted facility (*e.g.*, landfill) with proper documentation (*e.g.*, manifests, weigh tickets, etc.) to be provided to the Jefferson County Commission (Commission)

No soil to be taken off site otherwise without specific prior approval from the Commission.

Shipment: Characterize soil as required for disposal; disposal documentation must be provided to the Commission.

HEALTH AND SAFETY

Basis: Contaminants were identified in site soil exceeding human health screening levels during site assessments in 2006 and 2009. Since that time the site has been redeveloped and some contaminated soil removed. No confirmation or subsequent sample data is available. The safety protocols herein are based on limiting exposure to the contaminants identified in the site assessments.

PPE: Hand washing/hygiene and suggested management of outer garments.

Please note that if noticeably impacted soil (e.g., odors, visual indications, etc.) is encountered, stop work and notify Commission contact prior to proceeding.

1.0 INTRODUCTION

Potesta & Associates, Inc. (POTESTA) developed this Soil Management and Health and Safety Plan (SMP/HASP) to address Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) hazardous substances in soil during earthwork activities at the above referenced site (site). The site is presented on **Figure 1** in **Appendix A**. The Jefferson County Commission (Commission) is aware that environmental assessments performed prior to the purchase identified hazardous substances that may pose a health risk to human receptors (e.g., construction workers, visitors, etc.) during subgrade or earthwork activities. Those previous assessments were performed due to the property's historical use as an industrial manufacturing facility and other historical industrial activity in the vicinity of the subject site.

The Jefferson County Commission (Commission) plans to use the site for an office complex as-is with no significant activities below grade currently planned. However, it is likely that at some point activities such as construction or utility installation or upgrades may be required. This SMP/HASP is intended to notify prospective contractors and their personnel of the presence of CERCLA hazardous substances in the soil and provide procedures to minimize worker exposure and the potential for migration/transport of those substances. The requirements of this SMP/HASP are applicable during subgrade or earthwork activities, and do not apply to activities that do not involve excavation/movement of or direct contact with soil.

The health and safety protocols herein are related to COPCs in soil at the site. This SMP/HASP is not designed, nor intended for use, as a HASP for industrial/construction activities. POTESTA expects that those who may be involved in industrial/construction activities at the site to possess and adhere to HASPs that incorporate those activities as appropriate.

Please note that if noticeably impacted soil (e.g., odors, visual indications, etc.) is encountered, stop work and notify Commission contact prior to proceeding.

2.0 CONTACTS AND AREA INFORMATION

The key contacts for the facility and contractor(s) should be exchanged and clarified prior to the start of field activities.

2.1 Emergency Contacts

Centers for Disease Control ..... (404) 639-2888 (24 hour)
Alcohol Tobacco & Firearms (Explosives Information) ..... (800) 424-9555
National Poison Control Center ..... (800) 222-1222
West Virginia Department of Environmental Protection ..... (304) 926-0499

2.2 Directions to Nearest Hospital

Directions to the **Jefferson Medical Center**, including a map, are presented in **Appendix B**.

3.0 SUMMARY OF SOIL SAMPLING AND ANALYSIS

Regarding contaminant concentrations identified in soil, POTESTA reviewed site assessment documents provided by the Commission, including:

- *Phase II Environmental Site Assessment Report* by Environmental Resources & Consulting, LLC (ERC), dated March 2006
  - The report files included the text, one table of soil results, and one map of soil sample locations.
- *Review and Opinion Limited Phase II Environmental Site Assessment 300, 330 and 332 N. George Street* by ERC, dated June 2009
  - This document contains a discussion of a Phase II ESA performed in June 2009 by Nutshell Enterprises, Ltd (Nutshell). The Nutshell report was not provided.
  - ERC concluded that the contaminant levels were generally consistent with what they found during their previous Phase II ESA, and recommended soil management measures to be followed during the planned construction activities (construction of the current site structures).

The additional information was included in POTESTA's Phase I ESA:

> The subject property received a Notice of Violation (NOV) dated December 28, 2010. The NOV states the reason for the issuance of the NOV to be "The Generator's contractors failed to conduct hazardous waste determinations for all of its solid waste streams." The Incident Report associated with the NOV states that soil generated by the removal of several stone and cement cisterns was spread across the site during construction, specifically the area to be developed as the parking lot. Per WVDEP's request, the soil was excavated again and sampled prior to disposal. The Incident Report states that soil "tests came back showing there was some contamination from gasoline and gasoline related constituents" [sic]. The Incident Report does not mention if confirmation samples were collected for the area where the contaminated soil was placed once it was re-excavated. Additionally, the narrative in the Incident Report states that soil was shipped to a disposal facility where the soil was tested and found to contain lead concentrations exceeding hazardous waste thresholds. That soil was then regulated and disposed at a permitted facility as hazardous waste.

Based on the information reviewed, organic contaminants and metals were identified at concentrations exceeding *de minimis* risk-based concentrations (RBCs) during sampling activities conducted in 2006 and 2009. Subsequent to that, some contaminated soil was moved

around the site, with some or all of that soil eventually excavated and disposed off site. With no confirmation samples or subsequent site assessment data, it is reasonable to proceed with the presumption that while some contaminated soil has been removed from the site, there is the potential for remaining contaminant concentrations comparable to those identified in previous assessments.

4.0 SOIL MANAGEMENT

The primary soil management considerations at this site include controlling worker exposure, relocation of soil on site, movement of soil off site, and preventing migration of contamination from the site. Controlling worker exposure is addressed in **Section 5**. The remaining considerations are addressed in this section.

4.1 Relocation of Soil On Site

Soil can be relocated on site but should be covered with a direct contact cover once the work is completed. Workers or visitors in contact with the soil prior to placement under cover should adhere to this SMP/HASP.

If a large quantity of soil is to be relocated on site, an engineered Direct Contact Cover System may be warranted. This will be at the discretion of the Commission. If required, see Section F.2 of Appendix F of the VRP Guidance Manual (included as **Appendix C** of this SMP/HASP), which is WVDEP guidance for Direct Contact Cover Systems. While adherence to that guidance is not required for this site by any regulatory agency, it is considered a reasonable step to prevent worker exposure and/or further releases of hazardous substances. Please note that placement of a marker layer is not required for this site since there is currently no horizontal or vertical delineation/distinction of an impacted area or areas.

4.2 Off-Site Disposal

If soil is to be removed from the site, it should be disposed at a landfill or other permitted disposal facility. If disposed at a landfill, that facility will require approval from the WVDEP, which will include waste characterization. Following disposal, copies of disposal documentation (*i.e.*, completed manifests and weight tickets) must be provided to the Commission.

Other than for disposal at a permitted facility, no soil is to be taken off site without specific prior approval from the Commission.

4.3 Equipment Decontamination

Equipment used to handle site soil is to be decontaminated prior to leaving the site. Decontamination will consist of, at a minimum, removal of loose soil followed by cleaning using biodegradable soap followed by a clean water rinse.

4.4 Additional/Typical Earthwork Considerations

These considerations are typically applicable to earthwork/construction projects but are of significant importance to prevent further releases or off-site exposure.

4.4.1 Construction Track-Out

Tracking of soil onto roadways must be prevented. Controls may include stabilization measures such as gravel pad(s), or vehicle wash stations, shaker racks, etc.

4.4.2 Dust Control

Site activities should be monitored for spreading of dust, and water sprinkling or other suitable methods should be used to limit the dust to the lowest practical level. Water should not be used when it may create hazardous or objectionable conditions such as ice, flooding, or pollution. Activities on site should be conducted in such a manner as to prevent nuisance discharges of dust and water from the work areas.

Stockpiled material should also be monitored, and dust control measures initiated if needed.

It is expected that proper dust control will minimize/eliminate the concern of inhalation of CERCLA hazardous substances associated with soil.

4.4.3 Runoff

While it is not likely that an area over an acre will be disturbed, if that is the case it is expected that a construction stormwater permit will be required for the earthwork activities, and compliance with that permit will meet the intent of this SMP/HASP.

Regardless of permitting status, it is expected that Best Management Practices (BMPs) will be implemented in areas where runoff could be a concern, including dust control, stockpile area(s), and grading operations.

5.0 CONTROLLING WORKER EXPOSURE

These health and safety protocols are intended to apply to persons working in direct contact with site soil. The determination of applicability to individuals is at the discretion of the project management. The project-specific personal protective equipment (PPE) requirements (**Section 5.1**) are to remain in effect during operations involving direct contact with soil at the site.

Ingestion of contaminated soil is the primary risk pathway to construction workers. The exposure risks can be reduced through the use of PPE that will prevent or reduce the ingestion of soil and simple hygiene practices (hand washing) by construction workers.

Based on the available health and safety information, POTESTA has concluded the exposure risks to construction workers exposed to site soil can be adequately mitigated though personal hygiene practices and the use of commonly used PPE. Personnel in direct contact with soil/cuttings in Management Areas should take necessary precautions to reduce or eliminate exposure to themselves. Exposure can be controlled by:

- Wearing gloves to reduce exposure to impacted soil.
- Keeping hands away from mouth and face and washing hands before eating, drinking, or smoking.
- The use of a separate protective clothing layer, such as coveralls, which can greatly reduce the potential of direct contact exposure to workers.
- Washing exposed skin at regular intervals during periods of intrusive work activities.

5.1 Additional Precautions for Outer Garments

While the above-mentioned procedures are designed to control exposure to workers, there is the potential for exposure of non-workers (e.g., children, spouses, etc.) to site soil on outer garments used at the site. To avoid off-site exposure of non-workers, workers are encouraged to use dedicated and/or disposable outer garments when they may directly contact site soil.

For the purposes of this recommendation, outer garments include the following items:

- Shirt/pants/jackets (or coveralls)
- Boots or boot covers
- Gloves
- Hard hats

Dedicated items may be managed (including washing) by contractor on site and provided to workers as needed. Disposable items should be disposed of on site. Following their useful life or at completion of the project, dedicated items can be either discarded or washed in a manner that ensures removal of soil particles.

Please note that if contractor opts to use dedicated/non-disposable items and uses a commercial laundry to clean protective work clothes contaminated with lead, the contractor is required to inform the laundry in writing of the potentially harmful effects of exposure to lead per Title 29, Code of Federal Regulations (29 CFR) 1910.1025(g)(2)(vi).

6.0 RECORD KEEPING AND REPORTING

The Commission will provide this SMP/HASP to the primary site contractor, who will be responsible for implementation and record keeping per their respective health and safety requirements. Records for off-site soil shipments (*e.g.*, manifests, weight tickets, etc.) are to be retained and provided to the Commission upon completion of the applicable project.

APPENDIX C

APPENDIX F

Appendix F: Cover and Cap Guidance

F.1 INTRODUCTION

This guidance provides fundamental performance standards for cover and cap systems installed at VRP and UECA-LUST Program sites and should be followed to ensure that covers and caps used at these risk-based remediation sites in the future are reasonably consistent between sites and are effective in preventing direct contact exposure or surface water infiltration, as necessary.

The VRP and the UECA-LUST Program use risk-based cleanup standards that consider site-specific conditions and future land use to prevent unacceptable human and ecological risks, while encouraging the remediation and reuse of contaminated sites so that undeveloped land remains pristine. Remediation standards (De Minimis, Uniform, and Site-Specific) are used by the LRS to determine if a site represents an unacceptable risk. Various remedies, ranging from removal or treatment of contaminated media to activity and use limitations (AULs), are used alone or in combination to reduce risk and achieve the selected remediation standard. The UECA-LUST Program is a specific application of the risk-based remediation principles of the VRP, where Applicants remediate leaking underground storage tank sites to risk-based standards.

Based on the results of site characterization and risk assessment, the LRS selects a remedy or combination of remedies. The remedies are proposed and described in a Remedial Action Work Plan (RAWP) that is submitted to OER for review and comment. Where a cover or cap system is proposed to reduce risk or contaminant migration, details regarding the design, construction, and maintenance of these remedies must be submitted in the RAWP. The amount of information and supporting calculations that will be required to support the design of a cap or cover system will vary depending on the function of the system. For example, a simple soil cover that is intended to provide a 2-foot layer of clean soil between receptors and contaminated soil will require much less information than a cover system that will also function as a roadway, or a cap system that is intended to prevent surface water infiltration. The amount of information and design calculations required to support a proposed cap or cover are discussed in the subsequent sections.

After the cover or cap system has been installed, the construction process must be documented in a Remedial Action Completion Report (RACR). As discussed above, the amount of detail to be provided will depend on the complexity of the remedy, but in all cases, adequate information must be submitted to document that the material and installation requirements set forth in the design have been met. Documentation to be provided in the RACR should include as-built drawings that document the horizontal extent of the cover or cap, reports of all construction testing and inspection performed, and a description of any design variance or field modification that occurred.

APPENDIX F

Cap and cover systems are considered to be engineering controls for purposes of meeting a VRP remediation standard and are divided into 2 broad classes:

1. Direct Contact Cover System
   A systematic layering of material(s) that is specifically intended to prevent direct contact exposure to contaminated media that exceed a VRP remediation standard. Covers are commonly composed of soil, gravel, asphalt, concrete, or other similar materials that are suitable to act as a barrier to contact.
2. Low Permeability Cap System
   A systematic layering of materials that is specifically designed to prevent surface water infiltration into contaminated media that may result in leaching and migration of contaminants into an area that has not been previously impacted, or to prevent greater impact to media previously contaminated. Caps will always include a hydraulic barrier layer (natural or synthetic) that is specially designed to prevent water infiltration. Caps will sometimes also serve to prevent direct exposure to contaminated media, but not necessarily.

In general, contaminated media at VRP sites do not meet the definition of a solid or hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA), and, therefore, caps installed at VRP sites are not required to meet the prescriptive requirements of these regulatory programs. However, at VRP sites where another regulatory program has precedent, such as RCRA or the Toxic Substances Control Act (TSCA), the cap system design will be dictated by the requirements of that regulatory program. In these cases, cap systems designed and installed to meet those requirements are deemed to be acceptable to the VRP.

F.2 DIRECT CONTACT COVER SYSTEMS

A cover system must be designed, constructed, and maintained to prevent direct contact exposure to contaminated media for as long as the media remain contaminated above the applicable remediation standard (De Minimis, Uniform, or Site-Specific). Cover system designs should address site-specific factors, including, but not limited to:

- Current and potential future land use
- Surrounding land use and cover location (e.g., sites in or near unrestricted-use residential areas will require a more secure cover)
- Nature of the contaminants (concentration, volatility, toxicity, etc.)
- Quality, durability, and reliability of the cover system materials and construction

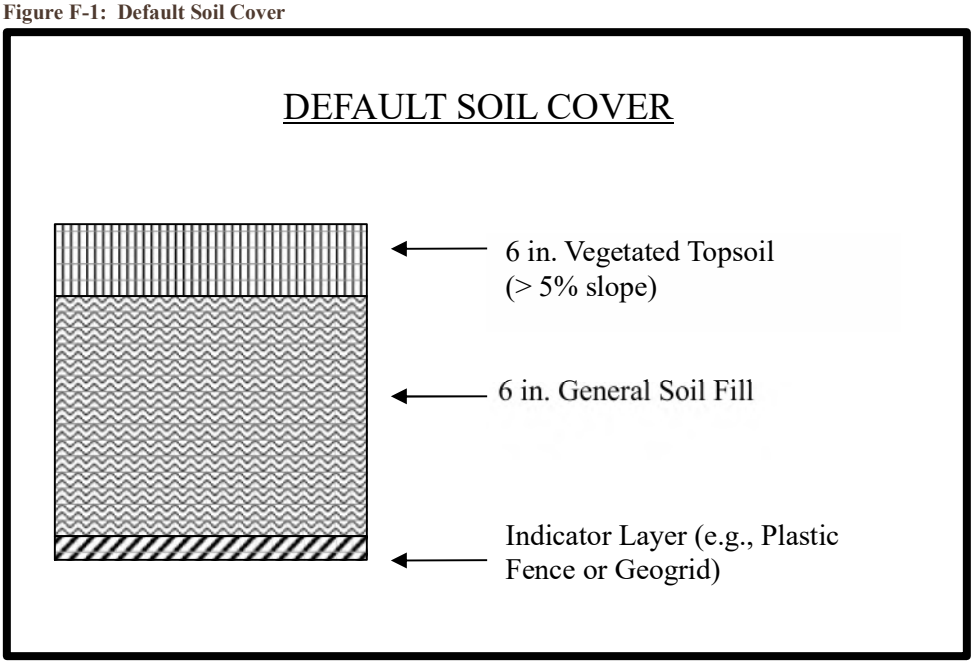
In all cases, where excavation of the soil underlying a cover system is prohibited or regulated, an indicator layer must be installed to notify persons that excavation below the indicator layer is controlled. The horizontal extent of a direct contact cover system must in all cases extend a minimum of 2 feet beyond the extent of the impacted media being protected from infiltration.

F.2.1 Soil Covers

A soil cover is typically the least expensive and simplest method of preventing direct contact exposure to underlying contaminated media. At a minimum, a 1-foot thickness of clean soil must be used to prevent direct contact. Soil covers must also be vegetated and maintained to prevent growth of deep-rooted vegetation, erosion, and deterioration over time. Therefore, the upper 6 inches of material must consist of soil that is capable of supporting vegetation, and an appropriate seeding mixture must be provided to establish a healthy stand of grass. The lower layer should not be over-compacted such that the water-retaining capability of the subsoil is significantly reduced.

The slope of a soil cover must not be steeper than 2:1 (H:V), and preferably no steeper than 3:1 to minimize the potential for slope instability. Soil covers placed on relatively steep slopes must be designed with adequate erosion control measures to prevent damage to the cover. This may include erosion control mats (jute, straw, coconut fiber, etc.) or may require rigid armor products (e.g., Armor Flex) on long or particularly steep slopes with a high potential for damage from run-off. Conversely, soil covers must be graded to be free-draining and prevent ponding. Therefore, a minimum slope of 5% should be maintained for vegetated soil surfaces. Figure F-1 depicts a default soil cover that meets the minimum performance standards.

Figure F-1: Default Soil Cover



The LRS must ensure that all material used in cover and cap systems does not contain contaminants from the site or an off-site source. Borrow material should always be obtained from undeveloped areas that have not been previously used for commercial, agricultural, or industrial purposes. If it is necessary to use material from an area that may contain contamination, the materials must be tested for potential contaminants prior to being used. Analytical parameters will depend on the soil source and previous use, but will likely include VOCs, SVOCs, and RCRA 8 metals, at a minimum. The LRS must consult with

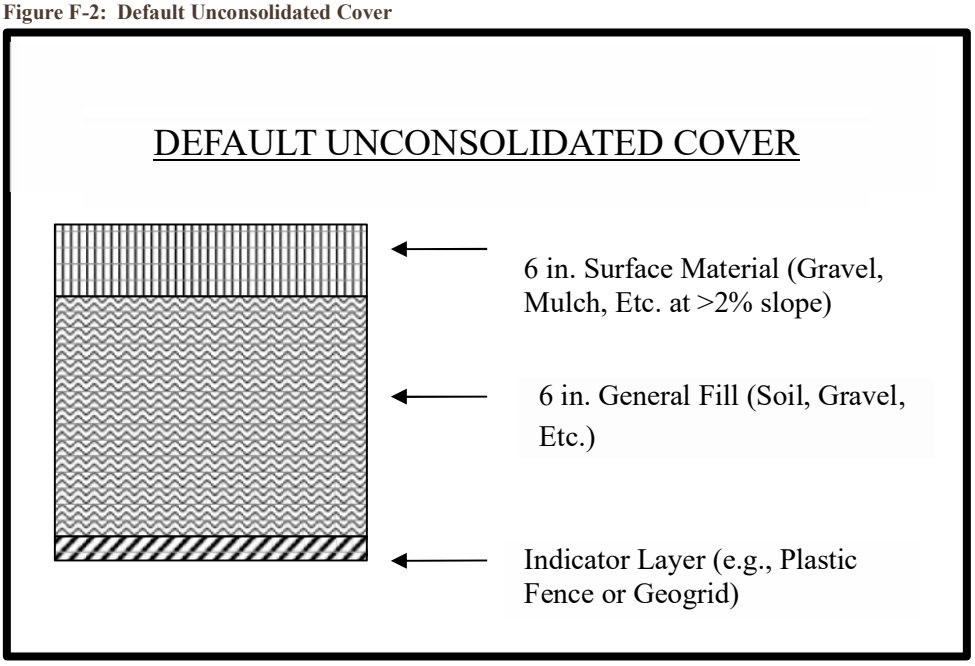
the OER Project Manager to determine the number of samples and analytical parameters necessary to properly evaluate potentially impacted materials, and this information must be included in the RAWP. All materials used for covers must meet De Minimis Standards appropriate for the site use or natural background levels.

F.2.2 Other Unconsolidated Covers

As an alternative to using soil to prevent direct contact with contaminated media, other materials may be used to partially or completely replace the soil. For example, a layer of aggregate (crushed stone or gravel) may be specified as the surface layer where limited vehicle traffic is anticipated to occur on the cover. Another possible scenario might be the use of rubber chips, wood chips, bark chips, or other organic mulch in situations where the final use includes landscaping, such as in a park or commercial development. Where alternate surface materials are proposed, vegetation is not required. However, a plan for inspection and maintenance will be required to ensure that the surface materials are not damaged by pedestrian or vehicular traffic or erosion. In each case, it is the responsibility of the LRS to demonstrate that the proposed cover material will prevent direct contact with the underlying contaminants and will continue to function effectively in the post-remediation scenario.

Where materials of differing particle sizes are proposed to be placed in layers, an appropriately designed separation layer (e.g., geotextile fabric) must be installed to prevent materials of differing particle size from mixing or disintegrating into each other. In all cases where unconsolidated materials are proposed to prevent direct contact exposure, the thickness of the material must be adequate to reliably prevent exposure and to minimize long-term maintenance. If a thinner direct contact exposure cover is necessary or desired, the LRS must propose another material type (e.g., pavement cover). Covers comprised of unconsolidated materials must be graded to be free-draining. A minimum slope of 2% should be maintained for gravel surfaces. Minimum slope for other surfaces should be designed on a case-by-case basis. Figure F-2 depicts an alternate unconsolidated cover that meets the minimum performance standards.

Figure F-2: Default Unconsolidated Cover



F.2.3 Pavement Covers

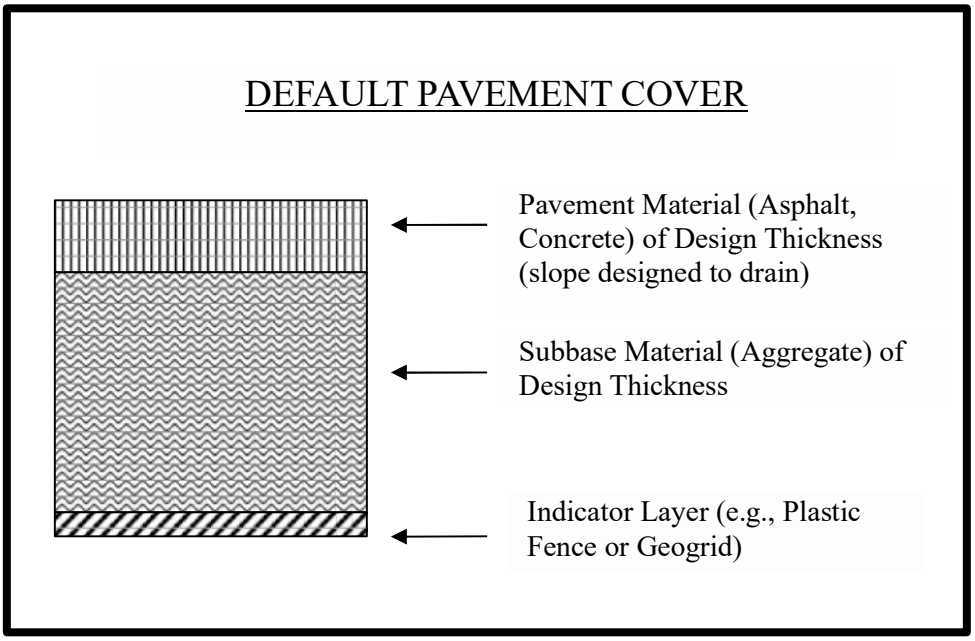
Pavement cover systems (concrete and asphalt) can prevent direct contact exposure to contaminated media while also providing site-related infrastructure, and, therefore, can often be an efficient remedy in commercial/industrial or recreational settings. However, damaged pavement systems can allow contaminated media to become exposed at the surface through settlement, cracking, freeze/thaw cycles, weathering, and other types of deterioration, unless these factors are adequately addressed through design, construction, and maintenance.

Pavement covers must be constructed over an appropriately prepared granular base course (generally compacted aggregate) to minimize freeze/thaw and provide the necessary support for the anticipated loads. Designs that minimize long-term maintenance should be used whenever possible. Pavement covers must be designed and constructed to ensure positive draining away from the cover and eliminate ponding. In all cases, the intended use of the covered area must be accounted for in the design. For example, traffic volume and vehicle loads must be considered, and the pavement design must meet commonly accepted requirements (e.g., WVDOT-DOH specification). These designs must be performed under the supervision of a Professional Engineer licensed in WV and must bear their professional seal.

Existing pavement covers in good condition which overlie contaminated media can be used in this application at sites where the impacted area is relatively small and exposure risks are relatively low, if information regarding the design and construction of the pavement system is provided in the RAWP. In all cases, an adequate inspection, maintenance, and repair program must be proposed and implemented to ensure that the pavement system continues to function as originally designed.

Granular layers (aggregates) used in pavement subbase systems must be separated from the underlying contaminated media with a geotextile layer to prevent migration of contaminated soil or water into the subbase. The geotextile must be designed to withstand anticipated loads and maintain its effectiveness over a long period of time to minimize the need for maintenance. Consideration should also be given in the design of granular subbase material potentially acting as a preferential flow path for infiltrating surface water or groundwater. In general, the use of a well-graded aggregate (i.e., "crusher run") is adequate to prevent infiltration and migration of surface water. Figure F-3 depicts a default pavement cover that meets the minimum performance standards.

Figure F-3: Default Pavement Cover



F.2.4 Buildings and Structures

An existing or new building or other concrete structure (e.g., pad, slab, sidewalk, etc.) may be used to prevent direct contact exposure to contaminated soils, provided the building slab or basement floor is adequate to meet the remediation standard and all structural design requirements. Additionally, roof runoff must be managed to minimize infiltration into contaminated soils.

Buildings and structures are typically used in concert with other cover systems such as pavement or soil to prevent exposure in commercial and industrial settings. Existing buildings with cracked slabs or basement floors, or walls in contact with contaminated soil, will generally not be acceptable covers unless the cracks can be reliably repaired and maintained. Buildings located on soils that are subject to settlement that could cause cracking in slab, floors, or walls do not meet the criteria for longevity and low-maintenance and are also unacceptable. If vapor migration may result in exposures above a remediation standard, this exposure must be addressed separately from the cover design through the use of a vapor barrier or sub-slab ventilation system.

F.2.5 Rail Trails

Rail trails are typically a special type of direct contact cover system. Rail trail covers are typically comprised of unconsolidated or pavement covers, but, in all cases, must be designed and constructed to withstand the permitted recreational use. For example, if a rail trail allows use by bicycles or horses, these surfaces must be more resilient than the surface installed at a rail trail that permits only foot traffic. In the latter case, a vegetated soil cover may be acceptable, whereas, in the former case, a gravel or pavement surface may be required along the trail alignment where traffic occurs. Rail trails that allow regular vehicles traffic (beyond inspection/maintenance by the trail manager) may require a pavement cover to prevent frequent maintenance.

Rail trail covers may include a combination of covers, because railroad corridors are often contaminated along the adjacent slopes and drainage features, as well as along the former railbed. For example, the high-traffic alignment along the former railbed may receive a more resistant cover while adjacent portions of the corridor would be covered by soil and vegetation.

F.3 LOW PERMEABILITY CAP SYSTEMS

Low permeability cover systems are required when the RAWP proposes to leave the source of groundwater contamination in place. The WV Groundwater Protection Act (W. Va. Code § 22-12, et seq.) requires that every reasonable effort be made to remove or mitigate the source of contamination that causes an exceedance of a groundwater standard. Therefore, to meet the requirements of the WV Groundwater Protection Act, it is necessary to install a low permeability cap system to mitigate the source by minimizing infiltration through the source. For purposes of the VRP, contaminated soils that are the result of typical site operations are not considered to be a source as defined by the WV Groundwater Protection Act. However, production/operation waste materials, such as spent foundry sand, wood treatment sludges, and other wastes that would typically be transported off-site for treatment or disposal are considered a source for purposes of the WV Groundwater Protection Act.

The design of a low permeability cap system must minimize the infiltration of surface water, precipitation, or snow melt through contaminated media to the maximum extent practicable. Therefore, a cap system must include a hydraulic barrier layer or multiple layers that reduce such infiltration. The design of these types of cover systems should address site-specific factors, including, but not limited to:

- Nature of contaminants (concentrations, solubility, mobility, toxicity, etc.).
- Depth of contamination. The deeper the contamination is, the less effective a hydraulic barrier may be, or the horizontal extent of the barrier may need to be expanded.
- Quality, durability, and reliability of the cover system materials and construction.

A cover system that meets the requirements for prevention of infiltration will likely be acceptable for prevention of direct contact. It should be evaluated under the guidelines in this guidance for the pathways being addressed.
